Automotive Ergonomics Heiner Bubb, Klaus Bengler, Rainer E. Grünen, Mark Vollrath, 2021-10-19. Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs, wishes, and characteristics of the user. In this context, the concept of the human-machine system has become established in a systematic way, and with a detailed view of the complicated technical and perceptual, psychological, and methodological connections, this book explains the basics of automotive ergonomics with numerous examples. The application is shown in examples such as package design of displays and control elements of environmental ergonomics such as lighting, sound, vibrations, climate, and smell. The design of driver assistance systems from an ergonomic perspective is also a central topic. The book is rounded off by methods of ergonomic vehicle development, the use of mock-ups, driving simulators, and tests in real vehicles and prototypes. For the first time, those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today's automobiles. This provides planners and designers of today's automobiles with concrete information for ergonomic product development, enabling them to keep an eye on decisive requirements and subsequent customer acceptance. This book is a translation of the original German 1st edition.

Automobilergonomie by Heiner Bubb, Klaus Bengler, Rainer E. Grünen, Mark Vollrath, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature, in 2015. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
