Fitzmaurice, Norman A. Martinez
Gutierrez**

Fishers And Aquaculture Manual:

FishStatJ Manual Food and Agriculture Organization of the United Nations, 2019-12-19 FishStatJ is a desktop application designed to disseminate FAO Fishery Statistical data to the world FishStatJ's primary aim is to display, refine and export data. However, unlike a spreadsheet software, it cannot modify the data, create graphs or perform advanced data analysis. One of FishStatJ's greatest strengths is that it can display species according to several authoritative classifications such as the International Standard Statistical Classification of Aquatic Animals and Plants (ISSCAAP) or the UN's Central Product Classification (CPC) and show the scientific name. **Fundamentals of Aquaculture** James W. Avault, 1996

Handbook on Fisheries and Aquaculture Technology NIIR Board of Consultants & Engineers, 2003-01-01 The fishery sector is important from the Indian economy's viewpoint as it contributes a source of income to a number of fishermen and has huge export potential. The systems and technology used in aquaculture have developed rapidly in the last fifty years. They vary from very simple facilities like family ponds for domestic consumption in tropical countries to high technology systems like intensive closed systems for export production. Much of the technology used in aquaculture is relatively simple, often based on small modifications that improve the growth and survival rates of the target species. Nowadays, the fish and fisheries industry is one of the fastest growing international commodity markets globally. Guaranteeing an adequate supply to this international market requires hundreds of thousands of fishing vessels and fish farms as well as tens of thousands of fish processing workers, wholesalers and retailers in countries spread all over the world. The fishery sector thus generates employment and income for millions of people and is one of the major fields to venture. A wide range of aspects of fresh water aquaculture such as selection of species of fish and shellfish, construction and preparation of various types of fish ponds, control of aquatic weeds and predators, production of seed fish and their transportation, fish nutrition and fish diseases and their control pertaining to composite fish culture, air breathing fish culture etc. have been dealt with a length for easy adoption. The major contents of the book are classification of fishes, general characters of fishes, techniques in fish identification, cold water fisheries of India, physical and chemical properties of fishery water, chemical constituents of fish, economic importance of fishes, fish in relation to human health, construction of fish farms etc. In this book, you can find all the basic information required on the fundamental aspects of the fisheries and aquaculture technology with detailed information of their applications, a wide variety of industrial processes etc. The book is very useful for research scholars, technocrats, institutional libraries and entrepreneurs who want to enter into the field of aquaculture technology.
