Kawanishi, 2024-10-02 This handbook provides comprehensive knowledge on device and system technologies for seamlessly  
integrated networks of various types of transmission media such as optical fibers and millimeter and THz waves to offer  
super high speed data link service everywhere The seamless integration of the knowledge of radio and optical technologies is  
needed to construct wired and wireless seamless networks High frequency bands such as millimeter wave and THz wave  
bands where super wideband spectra are available can offer high speed data transmission and high resolution sensing  
However the expected coverage is limited due to large wave propagation loss Thus convergence of radio and optical links is  
indispensable to construct worldwide networks The radio and optical technologies share the same physics and are closely  
related to each other but have been developed independently Therefore there is a big gap between these two fields Bridging  
the two fields this handbook is also intended as a common platform to design integrated networks consisting of wireless and  
wired links Full coverage of wireless and wired convergence fields ranging from basics of device and transmission media to  
applications allows the reader to efficiently access all the important references in this single handbook Further it also
