General Chemistry Laboratory Manual and Notebook Philip Borer, 2019-05-28 Introductory Chemistry Charles H. Corwin, 2001 This newest version of laboratory activities has evolved from Charles H. Corwin's experiments which have been used by nearly 200,000 students. In addition to the fresh new art program that enhances student orientation to each experiment, this version retains the highly successful format of prelaboratory preparation, stepwise guided procedures, and postlaboratory assignments. The laboratory manual is especially well suited for students in Introductory Chemistry, Preparatory Chemistry, and Allied Health Chemistry. In this newest version, the changes and improvements include particular attention to the environmental issue. This version does not contain any procedures involving lead, mercury, chromium, chloroform, or carbon tetrachloride experiments that utilize 13 X 100 mm test tubes rather than 1.6 X 150 mm test tubes so as to further reduce chemical waste. No special equipment is required, and the labs are not microscale. An increased effort to ensure the safety of students in the laboratory operations that involve even minimal potential danger have been avoided. Students are alerted to procedures that should be performed carefully, and the prelaboratory assignments have questions.
