Multidimensional Ranking Frans A. van Vught, Frank Ziegele, 2012-02-22 During the last decades ranking has become one of the most controversial issues in higher education and research It is widely recognized now that although some of the current rankings can be severely criticized they seem to be here to stay In addition rankings appear to have a great impact on decision makers at all levels of higher education and research systems worldwide including in universities Rankings reflect a growing international competition among universities for talent and resources at the same time they reinforce competition by their very results Yet major concerns remain as to the rankings methodological underpinnings and to their various impacts This new book presents a

comprehensive overview of the current state of the art of ranking in higher education and research and introduces a completely new approach called multidimensional ranking In part 1 rankings are discussed in the broader context of quality assurance and transparency in higher education and research In addition the many current ranking methodologies are analyzed and critized and their impacts are explored In part 2 a new approach to ranking is introduced based on the basic idea that higher education and research institutions have different profiles and missions and that the performances of these institutions should reflect these differences This multidimensional approach is operationalized in a new multidimensional and user driven ranking tool called U Multirank U Multirank is the outcome of a pilot project sponsored by the European Commission in which the new ranking instrument was designed and tested at a global scale **EBOOK: Managing**

Guide 2014: Where to go and what to study John O'Leary,2013-11-07 The Times Good University Guide is an essential tool that gives you all the information you need to make the crucial decision of where to study and how to make the crucial financial decisions about going to University bestselling objective and authoritative Note depending on your device tables may view best in landscape mode University Rankings William Yat Wai Lo,2014-02-17 This book adopts a qualitative case study approach to provide the readers with a systematic delineation and interpretation of the implications of the university ranking phenomenon for Taiwan s higher education system It reviews the literature on different theories concerning the

global transformation of higher education and presents basic information on higher education in Taiwan The author develops a four dimensional framework for the analysis of the ranking phenomenon in the island state First the technological ecological dimension aims to look into how the rankings have impacted Taiwan s higher education based on empirical findings from five Taiwanese public universities Next the technological geographical dimension examines how Taiwan can use rankings to promote its interests in global higher education The two conceptual dimensions focus on the relationship between the rankings and power in higher education They show how the phenomenon can be read and explained through theoretical lenses from ecological and geographical perspectives From an ecological perspective the empirical evidence suggests that the influence of rankings varies throughout the academic hierarchy in Taiwan The theoretical analysis then illustrates the relationship between the ranking phenomenon and the power structure in academic hierarchy Geographically while the empirical analysis is based on data from Taiwan the theoretical analysis offers essential insights that help readers to understand the changing global landscape of higher education and its implications in East Asia
