Current Topics in Polymer Research Robert K. Bregg, 2005 Polymers are substances containing a large number of structural units joined by the same type of linkage These substances often form into a chain like structure Starch cellulose and rubber all possess polymeric properties Today the polymer industry has grown to be larger than the aluminium copper and steel industries combined Polymers already have a range of applications that far exceeds that of any other class of material available to man Current applications extend from adhesives coatings foams and packaging materials to textile and industrial fibres elastomers and structural plastics Polymers are also used for most composites electronic devices biomedical devices optical devices and precursors for many newly developed high tech ceramics This book presents leading edge research in this rapidly changing and evolving field

**Oxydative Ageing of Polymers** Jacques Verdu, 2012-12-17 This book aims to rehabilitate kinetic modeling in the domain of polymer ageing where it has been almost abandoned by the research community Kinetic modeling is a key step for lifetime prediction a crucial problem in many industrial domains in which needs cannot be satisfied by the common empirical methods The book proposes a renewed approach of lifetime prediction in polymer oxidative ageing This approach is based on kinetic models built from relatively simple mechanistic schemes but integrating physical processes oxygen diffusion and stabilizer transport and use property for instance mechanical failure changes An important chapter is dedicated to radiation induced oxidation and its most important applications radiochemical ageing at low dose rates and photo chemical ageing under solar radiation There is also a chapter devoted to the problem of ageing under coupled oxidation and mechanical loading
