LAB EXERCISE 5: Lizard Evolution Virtual Lab

Answer the following questions as you finish each module of the virtual lab.

MODULE 1: Introduction

At the beginning of the virtual lab, you were asked to select eight lizards from a category. What criteria did you use to select your lizards?

My criteria were: size, color, and shape of the lizards.

Did your lizards grow different body types?

Yes, because the lizards that were selected to grow different body types were selected based on their body type. For example, the lizards that were selected to grow different body types were selected based on their body type.

An adaptation is a structure or function that is inherited by a population because it increases the ability to survive and reproduce in a particular environment. Provide one example and an explanation of an adaptation in the lizard lab.

One example of an adaptation is the ability to change color. This is an adaptation because it allows the lizards to blend in with their environment and avoid predators.

Provide one evolutionary explanation for why lizards that were selected to grow different body types (i.e., the green) would have survived a longer time.

One evolutionary explanation is that the lizards that were selected to grow different body types (i.e., the green) would have survived a longer time because they were better adapted to their environment.
