

## The Hydrogen Atom – Student Challenge

### Background Material

Classically, read the background information on Energy Levels, Light, and Transitions, and answer the following questions as clearly (and briefly) as possible.

Question 1: Compare the following table which compares how the Bohr Model and the Quantum Mechanical approach the Hydrogen atom. In what “interesting” facts do either things do differently and what is common to both? Be sure.

Concept	Bohr Model	Quantum Model
Electrons	positively charged particles in flat orbits	positively charged particles in flat orbits
Electrons	orbiting nucleus	negatively charged cloud
Orbitals	Electrons do not move, they give the probability picture	Classically, moving particles without orbits
Transitions of electrons to the next orbital	emitting a photon as the Bohr radius	Classical wave
Energy of the lowest level	$E_1 = -13.6 \text{ eV}$	$E_1 = -13.6 \text{ eV}$

Question 2: Compare the following table which compares the properties of two different elements by adding their appropriate relationships. What does this accomplish for you? Is each element has a unique wavelength, electron frequency, smallest energy, and the same relationship throughout as other elements?
