

Study Guide 1: Introduction to Research

Objectives

After studying the resources and doing the activities for this module, you should be able to:

- synthesise the meaning of educational research;
- describe one's level of comfort in understanding and using the language of research

Introduction

Whatever meaning we make of educational research is premised on whatever meaning we make of educational practice in all its diversity (Nixon & Sikes, 2003).

Much like teaching, research is an art and science. When one engages in research, there may be distinct processes and steps that should be understood and applied; however, there are also aspects of it that cannot be neatly generalised. The design and research decisions would rely on the specific contexts and traditions within which the research is situated or viewed. How about thinking beyond research in general and educational research specifically? Do you think the concerns will be similar? What will be the differences? Is it enough to think of educational research as research about education?

This module addresses these questions by providing an overview of the general concepts and topics that every researcher should start with. For some of you, this module may serve only as a refresher and shared context as you develop your research ideas.
