INTERIOR VIEW OF THE TRANSMISSION SYSTEM

This unique MERLO transmission layout uses two variable hydraulic piston motors, connected in parallel to a single variable displacement hydraulic pump.

Each motor independently powers a drive shaft connected to front and rear wheels on one side of the machine.

A differential effect is automatically achieved by a parallel connection of the hydraulic circuit.

This ensures high traction for all four wheels in even the most difficult ground conditions.

B. Variable displacement hydraulic pump with electronic management system

C. Left transmission shaft
