

# WHAT IS A METAPHOR?

## METAPHOR DEFINITION

- A metaphor is a form of figurative language. A metaphor is a rhetorical device in which an object, idea or situation is referred to directly as something it is not. It moves away from referring to something in a literal sense, and refers to it as something else in order to create a more imaginative figure of speech and description of something.
- When used as a literary device, a metaphor can add a more detailed and complex description to something giving the reader a more in depth experience. A metaphor is more easily able to convey an idea or an emotion than by simply using a literal statement.

metaphor and can be seen as a form of narrative cognition how implicit metaphors can be the sources of learner misconceptions how conceptual change and the acquisition of scientific expertise involve learning to coordinate the use of multiple implicit metaphors and how effective instruction can build on recognising the embodied nature of scientific cognition and the role of metaphor in scientific thought and learning The volume also includes three extended commentaries from leading researchers in the fields of cognitive linguistics the learning sciences and science education in which they reflect on theoretical methodological and pedagogical issues raised in the book This book was originally published as a special issue of the International Journal of Science Education
