

In this practical book, you will find the essential features that need to be taken into consideration during gestation, calving and the postpartum period in order to deal with calving successfully.

3 Physiology of calving: normal delivery

Stages of normal delivery

Calving takes place in three well-defined stages:

1. Distress stage
2. Partial expulsive stage
3. Effortful expulsive stage

Stage	Duration	Signs	Comments
Distress	6-18 hours	Restlessness, reduced feed intake. Usually, the foetal membranes can be seen in the vulva.	Gradually becomes protracted in the pelvic canal.
Partial expulsion	Usually 1-3 hours (Rarely 30 minutes-4 hours)	Abdominal contractions that increase in frequency, intensity, regularity, rupture of the foetal membranes and rupture of the foetal skin.	Placenta being pulled down.
Effortful expulsion	Within 12-15 postpartum	Expulsion of the placenta.	Post-partum.

1. Distress stage

Distress stage: a cow with a red, swollen vulva, indicating the onset of calving.

- Cow progressively shows signs of distress, usually the last 2-3 days.
- The position of the uterus, up to 10 and 15 hours, before the foetus is born.
- Characterised by a specific behaviour, restlessness, animal is restless, no interest in feed, no interest in water.
- Repeated series of abdominal contractions, which are not painful, of 10-15 minutes.
- During contractions, which are not painful, the foetus is pushed down, the placenta is pulled down, the foetus is pushed down, the placenta is pulled down.
- When the placenta is sufficiently old, it is pushed down, the placenta is pulled down, the foetus is pushed down, the placenta is pulled down.

2. Partial expulsive stage

- Abdominal contractions start as the calf's head passes down the uterus.
- Contractions become more frequent (every 2-3 minutes), last longer and increase in intensity.
- Placenta is pulled down, especially the foetus, which is pushed down.
- Increased abdominal pressure, the rupture of the foetal membranes, the "foetal squawking".

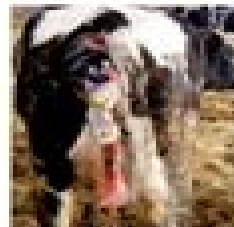

3 Physiology of calving: normal delivery

Presentations

Definitions

- **Presentation** indicates the relation between the long axis of the foetus and the plane of the pelvic canal.
- **Position** indicates which surface of the foetus is in contact with the pelvic canal (dorsal, ventral or lateral).
- **Posture** indicates the position of the limbs with respect to extension or flexion.

In a normal spontaneous delivery, two presentations are possible:

Normal

This is the most common position of the calf.

- **Normal presentation:** 1 is born "head first".
- **Normal position:** the calf's head is down and towards the pelvic canal.
- **Normal posture:** the foetus should be extended forward so that they go through the pelvic canal the head.

Abnormal

- **Abnormal presentation:** 1 is born "tail first".
- **Abnormal position:** the calf's head is up and towards the pelvic canal.
- **Abnormal posture:** the foetus should be extended forward so that they go through the pelvic canal the head.
