Gizejowski, Jakub Marcinowski, Aleksander Kozłowski, Jerzy Ziółko, 2016-05-03 Recent Progress in Steel and Composite Structures includes papers presented at the XIIIth International Conference on Metal Structures ICMS 2016 Zielona Góra Poland 15-17 June 2016 The contributions focus on the progress made in theoretical, numerical and experimental research with special attention given to new concepts and algorithmic procedures Computer Aided Seismic and Fire Retrofitting Analysis of Existing High Rise Reinforced Concrete Buildings Raja Rizwan Hussain, Muhammad Wasim, Saeed Hasan, 2015-08-13 This book details the analysis and design of high rise buildings for gravity and seismic analysis. It provides the knowledge structural engineers need to retrofit existing structures in order to meet safety requirements and better prevent potential damage from such disasters as earthquakes and fires. Coverage includes actual case studies of existing buildings, reviews of current knowledge for damages and their mitigation, protective design technologies and analytical and computational techniques. This monograph also provides an experimental investigation on the properties of fiber reinforced concrete that consists of natural fibres like coconut coir and also steel fibres that are used for comparison in both Normal Strength Concrete (NSC) and High Strength Concrete (HSC). In addition, the authors examine the use of various repair techniques for damaged high rise buildings. The book will help upcoming structural design engineers learn the computer aided analysis and design of real existing high rise buildings by using ACI code for application of the gravity loads, UBC 97 for seismic analysis and retrofitting analysis by computer models. It will be of immense use to the student community, academicians, consultants and practicing professional engineers and scientists involved in the planning, design, execution, inspection and supervision for the proper retrofitting of buildings *Wind and Earthquake Resistant Buildings* Bungale S. Taranath, 2004-12-15 Developed as a resource for practicing engineers while simultaneously serving as a text in a formal classroom setting, *Wind and Earthquake Resistant Buildings* provides a fundamental understanding of the behavior of steel, concrete and composite building structures. The text format follows in a logical manner the typical process of designing a building *Earthquake Resistant Engineering Structures VIII* C. A. Brebbia, Michele Maugeri, 2011 In order to protect the built environment in earthquake prone regions of the world, it is important to retrofit and rehabilitate existing structures and infrastructure as well as to ensure the optimal design and construction of new facilities. The high stakes in human life and property in urban, densely populated urban areas has been driving research on advances in this field. These advances are presented biennially at a conference organized by the Wessex Institute of Technology. This book contains the papers from the latest conference in the series which began in 1991. The papers cover Geographical and geotechnical engineering, Seismic hazard and vulnerability, Seismic isolation and energy dissipation, Structural dynamics, Building performance during earthquakes.
