A single skin cover for a swimming pool requires a high energy level input during winter since a relatively high internal temperature level needs to be maintained. The heating costs unfortunately are excessive.

European Design Guide For Surface Tensile Structures:

The European Design Guide for Tensile Surface Structures Brian Forster, Marijke Mollaert, 2004 European Design Guide for Surface Tensile Structures, 2004 Fabric Structures in Architecture J Llorens, 2015-03-28 Fabric Structures in Architecture covers the varying ways textiles and their properties are used in building construction with particular focus given to tensile structures The text begins with the fundamental principles of textiles including the origins of fabric architecture then progressing to a discussion of the modern textiles of today It covers relevant textile materials and their properties including coatings and membranes In addition a range of design considerations are discussed with detailed information on installation and failure modes A series of case studies from around the world accompany the discussion illustrating the applications of textiles in architecture Offers key coverage of the fundamental principles from the origins of fabric architecture to modern textile Provides analysis of relevant textile materials and their properties including coatings and membranes Contains expert insights in to the applications of textiles in architecture presenting a series of relevant case studies from around the world **Biaxial Testing for Fabrics and Foils** Paolo Beccarelli, 2015-01-30 This book offers a well structured critical review of current design practice for tensioned membrane structures including a detailed analysis of the experimental data required and critical issues relating to the lack of a set of design codes and testing procedures The technical requirements for biaxial testing equipment are analyzed in detail and aspects that need to be considered when developing biaxial testing procedures are emphasized The analysis is supported by the results of a round robin exercise comparing biaxial testing machines that involved four of the main research laboratories in the field The biaxial testing devices and procedures presently used in Europe are extensively discussed and information is provided on the design and implementation of a biaxial testing rig for architectural fabrics at Politecnico di Milano which represents a benchmark in the field The significance of the most recent developments in biaxial testing is also explored Construction Manual for Polymers + Membranes Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes Innovative technical developments are constantly improving its material properties at the same time there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of their lingering reputation as environmental

offenders From the history of plastics and membranes in architecture to their material properties and requirements in construction and design the Plastics and Membranes Construction Manual cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the Im DETAIL series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library

the current and potential paths oriented towards a new concept of Architectural Heritage through actions referring to Innovation and Experimentation and Protection and Transformation of the Architectural Heritage The development of the themes is articulated in two sessions dealing with the aspects related to the analysis and mapping of Architectural Heritage to face the context of the current Climate Crisis and the development of projects and experimentations oriented to the Green and Digital Transition The evolution of the concept of Heritage as conceived by the United Nations 2030 Agenda and in the Green Deal and New European Bauhaus aimed at constructing an inclusive and universally recognised definition to support supranational objectives of sustainable human development gives rise to innovative strategies methodologies and technologies that in a direction of mitigation contrast and adaptation to climate change allow for the safeguard renewed management and a hope for valorisation of Heritage on a national scale In this direction the understanding of Architectural Heritage as a non renewable resource determines the need to activate design experimentation laboratories oriented towards regeneration articulated and complex which require in order to respond to the challenges posed by our era a sensitive and dialogic multidisciplinary vision of a holistic type In fact on the one hand it is necessary to redefine the usability and management methods of built heritage through the adoption of digital mobility energy ecological social green and blue infrastructures on the other hand it is necessary to introduce new qualitative and quantitative parameters and performance indicators adequate to verify the validity of the implemented strategies in a perspective of adaptation to climate change able to clarify contents processes and tools to contrast future risks The pursuit of these objectives refers to the innovation of training paths professionalising procedures administrative regulations and public policies that involve citizens and the private partnership towards a different project qualification and empowerment of stakeholders inhabitants professionals and clients The Technological Project makes it possible to activate different interventions aimed at acting in an integrated manner on assets context and communities according to an approach that reinterprets them on a common score as proposed by the European Next Generation programme in three priority aspects digitalisation and innovation environmental transition increased resilience and social sustainability of national economies In this scenario the interventions aimed at outlining sustainable development actions will have to place these concepts at the centre in a harmonious vision that starts from the recognition and enhancement of the Architectural Heritage recognising it as a fundamental asset of the territories

Lightweight Landscape Alessandra Zanelli, Luigi Spinelli, Carol Monticelli, Paolo Pedrali, 2015-10-13 This book explains how lightweight materials and structures can be deployed in buildings to meet high environmental and aesthetic standards and emphasizes how the concept of lightness in building technology and design dovetails with the desire to enhance landscape The first part of the book on lightweight construction aims to foster the use of membranes within the specific climatic context and in particular considers how lightweight materials and innovative technologies can enrich the quality of temporary spaces The second part focuses exclusively on landscape presenting novel approaches in the search for visual

lightness and the quest to improve urban spaces Particular attention is paid to the Italian experience where the traditional appreciation of brick and stone has limited the scope for use of lightweight structures and membrane materials often relegating them to a secondary or inappropriate role The reader will come to appreciate how this attitude demeans a very advanced productive sector and neglects the ancient tradition of temporary architecture
