Geoscience for the Public Good and Global Development Gregory R. Wessel, Jeffrey K. Greenberg, 2016-05-18 Offers overview of applications of geosciences to sustainable development and geophilanthropic efforts worldwide and offers advice to guide creation of development projects Primacy of geologic input to all development activities is highlighted along with problems that are encountered and environmental issues that must be addressed Analytic Research Foundations for the Next-Generation Electric Grid National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-05-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids However the grid that was developed in the 20th century and the incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a need for continued shorter term engineering research and development building on the existing analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in mathematical and computational sciences that is needed for the next generation grid It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation's research and development infrastructure the tools it needs to effectively develop test and use this research Nuclear Science Abstracts, 1975 *Accessions of Unlimited Distribution Reports*, 1971-02-19 **Micro- to Macro-Scale Dynamics of Earth's**

**Cancer, Radiation Therapy, and the Market** Barbara Bridgman Perkins, 2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers staggeringly high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and the Market shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them In the process they

incorporated market strategies into medical organization and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health care systems China, Trust and Digital Supply Chains Warwick Powell,2022-09-01 China Trust and Digital Supply Chains presents a critical reflection on blockchain technologies in the context of their adoption in China and the world that China is engaged in and shaping Approaching the issues of blockchain technology adoption and development on China s own terms is critical if policy makers and others are to make effective sense of one of the key dynamics shaping the next few decades of the global landscape The work challenges the trust trope that dominates much discussion of blockchain technology s application It argues contrary to the predominant trust trope that blockchain is not about trust at all It shows that China s re imagining of the 21st century global order is premised on driving intensified cross border economic interactions without the presupposition of trust and blockchain technology makes that possible It also explores the paradox of technological decentralisation being taken up with vigour by a centralist polity the role of blockchain technology as a critical condition of existence for the successful globalisation of China s digital currency initiative and the need to devise governance institutions that are multilateral in nature to reflect the multi polar nature of decentralised information systems with domestic and cross border permutations This book is of significant interest to readers of political economy public policy blockchain technology and Chinese studies
