Potentiality Barbara Vetter, 2015-02-12

Individual objects have potentials paper has the potential to burn an acorn has the potential to turn into a tree some people have the potential to run a mile in less than four minutes Barbara Vetter provides a systematic investigation into the metaphysics of such potentials and an account of metaphysical modality based on them In contemporary philosophy potentials have been recognized mostly in the form of so called dispositions solubility fragility and so on Vetter takes dispositions as her starting point but argues for and develops a more comprehensive conception of potentiality She shows how with this more comprehensive conception an account of metaphysical modality can be given that meets three crucial requirements 1 Extensional correctness providing the right truth values for statements of possibility and necessity 2 formal adequacy providing the right logic for metaphysical modality and 3 semantic utility providing a semantics that links ordinary modal language to the metaphysics of modality The resulting view of modality is a version of dispositionalism about modality it takes modality to be a matter of the dispositions of individual objects and crucially not of possible worlds This approach has a long philosophical tradition going back to Aristotle but has been largely neglected in contemporary philosophy In recent years it has become a live option again due to the rise of anti Humean powers based metaphysics The aim of Potentiality and Possibility is to develop the dispositionalist view in a way that takes account of contemporary developments in metaphysics logic and semantics
