**FRP Composites in Civil Engineering** Jin-Guang Teng, 2001-11-15 This Proceedings contains the papers presented at the International Conference on FRP Composites in Civil Engineering held in Hong Kong China on 12-15 December 2001. The papers contributed from 24 countries cover a wide spectrum of topics and demonstrate the recent advances in the application of FRP Fibre reinforced polymer composites in civil engineering while pointing to future directions of research in this exciting area.

**Developments in fiber-reinforced polymer (FRP) composites for civil engineering** N.U. Uddin, M.A. Mousa, 2013-05-15 The chapter begins by discussing a new type of sandwich panel called composite structural insulated panels (CSIPs) intended to replace the traditional SIPs that are made of wood-based materials. A detailed analytical modeling procedure is presented in order to determine the global buckling, interfacial tensile stress at facesheet-core debonding, critical wrinkling stress at facesheet-core debonding, equivalent stiffness and deflection for CSIPs. The proposed models were validated using experimental results that have been conducted on full-scale CSIP walls and floor panels. In order to be used as a hazard-resistant material, a detailed section was presented to show the resistance of CSIP elements to the different types of hazard effects including impact loading, floodwater effect, fire effect and windstorm loading.

**The International Handbook of FRP Composites in Civil Engineering** Manoochehr Zoghi, 2013-09-26 The use of high-performance fiber-reinforced polymer (FRP) composite materials has expanded beyond the aerospace and marine industries into civil engineering and related disciplines. This handbook provides a complete primer on FRP composites, including materials, manufacturing, life cycle costs and mechanics. It also focuses on professional applications such as hybrid FRP composite systems, composites for reinforcement, nondestructive testing and evaluation, and design philosophies and guidelines. It includes standards of practice from around the world as well as helpful design charts, formulas and tables for easy reference.

**Advanced Fibre-Reinforced Polymer (FRP) Composites for Structural Applications** Jiping Bai, 2013-09-30 Advanced fibre-reinforced polymer (FRP) composites have become essential materials for the building of new structures and for the repair of existing infrastructure. Advanced fibre-reinforced polymer (FRP) composites for structural applications provides an overview of different advanced FRP composites and the use of these materials in a variety of application areas. Part one introduces materials used in the creation of advanced FRP composites, including polyester, vinylester and epoxy resins. Part two goes on to explore the processing and fabrication of advanced FRP composites and includes chapters on prepreg processing and filament winding processes. Part three highlights properties of advanced FRP composites and explores how performance can be managed and tested. Applications of advanced FRP composites, including bridge engineering, pipe rehabilitation in the oil and gas industry and sustainable energy production, are discussed in part four. With its distinguished editor and international team of expert contributors, Advanced fibre-reinforced polymer (FRP) composites for structural applications is a technical resource for researchers and engineers using advanced FRP composites.

as well as professionals requiring an understanding of the production and properties of advanced FRP composites and academics interested in this field Provides an overview of different advanced FRP composites and the use of these materials in a variety of application areas Introduces materials used in the creation of advanced FRP composites including polyester vinylester and epoxy resins Explores the processing and fabrication of advanced FRP composites and includes chapters on prepreg processing and filament winding processes

*Developments in fiber-reinforced polymer (FRP) composites for civil engineering* N. Uddin,A.M. Abro,J.D. Purdue,U. Vaidya,2013-05-15 Abstract The primary objective of this chapter is first to introduce and demonstrate the application of thermoplastic woven glass reinforced polypropylene in the design of modular fiber reinforced bridge decks and next the development of jackets for confining concrete columns against compression and impact loading The design concept and manufacturing processes of the thermoplastic bridge deck composite structural system are presented by recognizing the structural demands required to support highway traffic Then the results of the small scale static cylinder tests and the impact tests of concrete columns are presented demonstrating that thermoplastic reinforcement jackets act to restrain the lateral expansion of the concrete that accompanies the onset of crushing maintaining the integrity of the core concrete and enabling much higher compression strains compared to CFRP composite wraps to be sustained by the compression zone before failure occurs

Developments in fiber-reinforced polymer (FRP) composites for civil engineering P. Qiao,J.F. Davalos,2013-05-15 This chapter presents a systematic approach for material characterization analysis and design of all fiber reinforced polymer or plastic FRP composite structures The suggested bottom up analysis concept is applied throughout the procedure from materials microstructures to macro components to structural members and finally to structural systems thus providing a systematic analysis methodology for all FRP composite structures The systematic approach described in this chapter can be used efficiently to analyze and design FRP shapes and bridge systems and also develop new design concepts for all composite structures
