

1. A-N fittings are used in TWM Fuel Pressure Regulators.

The fitting that screws into the regulator body for either fuel supply or return line employs a straight 9/16"-18 thread with an O ring seal. This type of thread and O ring combination is often referred to as a "pump fitting". If replacement of this fitting is required, a thread length of no more than 3/8" (10mm) should be used.

2. Adjustment of fuel pressure may be carried out by loosening the locknut on the adjusting screw and turning the screw in or out to achieve the desired pressure. If using the type of regulator which references manifold pressure, adjustments should be made with the reference hose disconnected. Fuel pressure under normal operation, with reference hose connected, should be observed and adjustments made accordingly.
