Sibert,Jennifer L. Nielsen,2013-03-09 Reviews Methods and Technology in Fish Biology and Fisheries published by Kluwer Academic Publishers is a book series dedicated to the publication of information on advanced forward looking methodologies technologies or perspectives in fish and is especially dedicated to relevant topics addressing global fisheries This series international concern in fish and fisheries Humans continue to challenge our environments with new technologies and technological applications The dynamic creativity of our own species often tends to place the greatest burden on our supporting ecosystems This is especially true for aquatic networks of creeks lakes rivers and ocean environments We also frequently use our conceptual powers to balance conflicting requirements and demands on nature and continue to develop new approaches and tools to provide sustainable resources as well as conserve what we hold most dear on local and global scales This book series will provide a window into the developing dynamic among humans aquatic ecosystems both freshwater and marine and the organisms that inhabit aquatic environments There are many reasons to doubt the increasing social and economic value technology has gained over

the last two centuries Science and technology represent stages in human development I agree with Ernst Mayer when he said in *Toward a New Philosophy of Biology* 1988 that endeavors to solve all scientific problems by pure logic and refined measurements are unproductive if not totally irrelevant

Recovering Biodiversity in Indian Forests G. Vishwanatha Reddy, K. Ullas Karanth, N. Samba Kumar, Jagdish Krishnaswamy, Krithi K. Karanth, 2016-05-24 This book demonstrates how varying levels of human disturbance manifested through different management regimes influence composition richness diversity and abundance of key mammal bird and plant species even within ecologically similar habitats Based on our results we show the critical importance of the wildlife preservation approach for effective biodiversity conservation The study also provides examples of a practical application of rigorous methods of quantitative sampling of different plant and animal taxa as well as human influences thus serving as a useful manual for protected area managers Protected areas of various kinds have been established in India with the goal of arresting decline in and to provide for recovery of biodiversity and ecosystem services A model that targets wildlife preservation under state ownership is practiced across the country However forests in India are under intensive human pressure and varying levels of protection therefore protected areas may also experience open access resource use a model that is being aggressively advocated as a viable alternative to preservationism We have evaluated the conservation efficacy of alternative forest management models by quantifying levels of biodiversity under varied levels of access resource extraction and degree of state sponsored protection in the Nagarhole forest landscape of southwestern India

Michael Scott, Patricia Heglund, Michael L. Morrison, 2002-02 Predictions about where different species are where they are not and how they move across a landscape or respond to human activities if timber is harvested for instance or stream flow altered are important aspects of the work of wildlife biologists land managers and the agencies and policymakers that govern natural resources Despite the increased use and importance of model predictions these predictions are seldom tested and have unknown levels of accuracy *Predicting Species Occurrences* addresses those concerns highlighting for managers and researchers the strengths and weaknesses of current approaches as well as the magnitude of the research required to improve or test predictions of currently used models The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales It is a comprehensive reference that offers an exhaustive treatment of the subject with 65 chapters by leading experts from around the world that review the history of the theory and practice of modeling and present a standard terminology examine temporal and spatial scales in terms of their influence on patterns and processes of species distribution offer detailed discussions of state of the art modeling tools and descriptions of methods for assessing model accuracy discuss how to predict species presence and abundance present examples of how

spatially explicit data on demographics can provide important information for managers An introductory chapter by Michael A Huston examines the ecological context in which predictions of species occurrences are made and a concluding chapter by John A Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models Other contributors include Michael P Austin Barry R Noon Alan H Fielding Michael Goodchild Brian A Maurer John T Rotenberry Paul Angermeier Pierre R Vernier and more than a hundred others Predicting Species Occurrences offers important new information about many of the topics raised in the seminal volume Wildlife 2000 University of Wisconsin Press 1986 and will be the standard reference on this subject for years to come Its state of the art assessment will play a key role in guiding the continued development and application of tools for making accurate predictions and is an indispensable volume for anyone engaged in species management or conservation
