

## Simpsons Genetic Probability Worksheet

There are six Punnett square problems featured below. You will be graded on both filling in the Punnett square as well as filling in the correct answer next to the multiple choice questions after each problem.

### Problem One: Typical Punnett Square Problem

Milhouse is extremely worried that because his dad is bald he will also be bald. To relieve his fear, he has asked you to use your Punnett square skills to determine what the probability of him being bald will be. Milhouse is aware that his dad is heterozygous for baldness ( $Bb$ ) while his mom does not carry the baldness gene and so she is homozygous for no baldness ( $bb$ ). Remember baldness is dominant ( $B$ ) while no baldness is recessive ( $b$ ).

\_\_\_\_\_ 1. What is the probability that Milhouse will be bald?

- a. 0%                      b. 25%                      c. 50%                      d. 75%

### Problem Two: Incomplete Dominance

Homer has decided he wants to go into the dog breeding business and wants to use Santa's Little Helper. Santa's Little Helper is heterozygous light brown ( $BB'$ ), a combination of dark brown ( $B$ ) and white ( $B'$ ). Homer wants to get puppies that are dark brown, light brown and white and has two choices of dogs he can mate with Santa's Little Helper: Penelope, who is also light brown ( $BB'$ ) or Samantha, who is white ( $B'B'$ ). Create Punnett Squares for each dog to help Homer figure out the answer.

Penelope

Samantha

2. Which dog would be best to mate with Santa's Little Helper to get the most different colored puppies?

- a. Penelope                      b. Samantha                      c. Neither one                      d. Either one (same odds)
