Bernoulli's Principle

What is Bernoulli's Principle?

Bernoulli's principle helps explain how an aircraft can fly. When an aircraft moves through the air, the air flows over the wings. The air that flows over the top of the wing moves faster than the air that flows under the wing. This creates a difference in pressure, with the air pressure being lower on top of the wing than on the bottom. This difference in pressure creates lift, which allows the aircraft to fly.
