Development Roshan Moradali Mehdizadeh,2011 ABSTRACT There are five different publications that establish guidelines for sustainable building development that are examined in this report 1 Leadership in Energy and Environmental Design LEED 2 CalGreen 3 the International Green Construction Code IGCC 4 ASHRAE Standard 189 1 Standard 189 1 and 5 The San Francisco s Green Building Ordinance SFGBO Having multiple publications can cause confusion among building developers architects engineers building consultants or various jurisdictions on what publication to follow use or reference in building development projects This thesis will provide various parties involved in building development a thorough understanding of each publication and the similarities or differences between them which will ultimately assist in identifying areas for all publications to improve Specifically this thesis demonstrates that the Material and Energy sections for all the publications must advance beyond the current requirements Also the comparison validates that CalGreen s Tier 2 is similar to LEED s local ordinances like the SFGBO This may mean two things 1 LEED will need to advance its gold or platinum certification requirements or potentially become less relevant or 2 local ordinances should reference or adopt CalGreen Tier 2 so that there is common language between local and state regulations This thesis identifies that LEED has the most stringent guidelines under the Building Site section out of all the publications Likewise the IGCC and Standard 189 1 have provisions under Water Use that push beyond other publications Additionally similar language between LEED and Standard 189 1 was found which was unsurprising as both publications are authored by the USGBC *Resources in Education* ,1987
