### **Designing Low Carbon**

**Societies in Landscapes** Nobukazu Nakagoshi, Jhonamie A. Mabuhay, 2014-05-09 This book focuses on three major means of achieving a low carbon society conservation of the ecosystem complex changes of arrangement of landscapes and creation of biodiversity There are specific countermeasures to be taken for carbon absorption in the three types of landscapes urban cultural and natural because their carbon balances differ Urban landscapes are promising sites because they have the potential for greening and the creation of biodiversity Cultural landscapes in the tropics had not been actively researched until recently but this book now presents a collection of several cases focused on those areas Natural landscapes had existed in abundance in developing countries later nature protection areas were designated to coexist with development Now however developmental pressure has penetrated into those nature protection areas and landscape ecological projects are urgently required to preserve them As a result of global warming abnormal weather phenomena including super typhoons have occurred frequently in recent years The major underlying cause is the higher concentration of greenhouse gases released by human activities As well major natural absorbers of CO<sub>2</sub> such as forests wetlands and coral reefs are shrinking and the human impact is causing the ecological balance to deteriorate Controlling CO<sub>2</sub> emissions and expanding the CO<sub>2</sub> absorbers are keys to reducing total CO<sub>2</sub> Low carbon societies can be established by maintaining the original CO<sub>2</sub> balance through integration of multiple tools with contributions from diverse fields such as physics and chemistry physiology and humanities and education On the basis of an international consensus the environment must be protected no matter what sacrifices are required As this book demonstrates achieving a low carbon society is a top priority and landscape conservation is the first step in ecological research toward that goal     **Models for Planning Wildlife Conservation in Large**

**Landscapes** Joshua Millsbaugh, Frank R. Thompson, 2011-04-28 A single resource volume of information on the most current and effective techniques of wildlife modeling Models for Planning Wildlife Conservation in Large Landscapes is appropriate for students and researchers alike The unique blend of conceptual methodological and application chapters discusses research applications and concepts of modeling and presents new ideas and strategies for wildlife habitat models used in conservation planning The book makes important contributions to wildlife conservation of animals in several ways 1 it highlights historical and contemporary advancements in the development of wildlife habitat models and their implementation in conservation planning 2 it provides practical advice for the ecologist conducting such studies and 3 it supplies directions for future research including new strategies for successful studies Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation planning the book could be used in studying wildlife habitat

models conservation planning and management techniques Additionally it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations Additionally the length of the book would be ideal for graduate student seminar course Using wildlife habitat models in conservation planning is of considerable interest to wildlife biologists With ever tightening budgets for wildlife research and planning activities there is a growing need to use computer methods Use of simulation models represents the single best alternative However it is imperative that these techniques be described in a single source Moreover biologists should be made aware of alternative modeling techniques It is also important that practical guidance be provided to biologists along with a demonstration of utility of these procedures Currently there is little guidance in the wildlife or natural resource planning literature on how best to incorporate wildlife planning activities particularly community based approaches Now is the perfect time for a synthetic publication that clearly outlines the concepts and available methods and illustrates them Only single resource book of information not only on various wildlife modeling techniques but also with practical guidance on the demonstrated utility of each based on real world conditions Provides concepts methods and applications for wildlife ecologists and others within a GIS context Written by a team of subject area experts The Archaeology of Human-Environmental Dynamics on the North American Atlantic Coast Leslie

Reeder-Myers, John A. Turck, Torben C. Rick, 2019-11-04 This edited volume brings together leading scholars focused on the Native American peoples who called the Atlantic coast home for thousands of years Each chapter will address an individual region of the Atlantic coast of North America ranging from the Canadian Maritime Provinces to the Florida Keys

Management of America's Nonfederal Forests,1998-05-01 The federal role in the management of nonfederal U S forests was once relatively simple to assist in the prevention and control of wildfires The administrative structure to carry out this role was similarly uncomplicated with most programs under the aegis of the U S Department of Agriculture In recent years however both the management and administrative landscapes have changed dramatically Responsibility for the federal role in nonfederal forests has been expanded to include a number of cabinet departments and independent agencies which must address critical issues such as reforestation wetlands disruption and biodiversity protection With two thirds of all U S forests on nonfederal lands these issues are becoming increasingly more important Now a first of its kind examination of the federal role in nonfederal forest management Forested Landscapes in Perspective presents a comprehensive look at the current landscape and recommends improvements that best serve public and private interests This timely volume includes an insightful description of the current situation and recent trends followed by a thorough examination of major policy and program issues affecting nonfederal forests Among these are emerging environmental concerns such as forest fragmentation and large scale climate change as well as issues of economic importance such as the availability of timber supplies

**Landscape Boundaries** Andrew J. Hansen,Francesco DiCastri,2012-12-06 The emergence of landscape ecology during the 1980s represents an important maturation of ecological theory Once enamored with the conceptual beauty of well balanced homogeneous ecosystems ecologists now assert that much of the essence of ecological systems lies in their lumpiness Patches with differing properties and behaviors lie strewn across the landscape products of the complex interactions of climate disturbance and biotic processes It is the collective behavior of this patchwork of ecosystems that drives pattern and process of the landscape is not an end point This realization of the importance of patch dynamics in itself however Rather it is a passage to a new conceptual framework the internal workings of which remain obscure The next tier of questions includes What are the fundamental pieces that compose a landscape How are these pieces bounded To what extent do these boundaries influence communication and interaction among patches of the landscape Will consideration of the interactions among landscape elements help us to understand the workings of landscapes At the core of these questions lies the notion of the ecotone a term with a lineage that even predates ecosystem Late in the nineteenth century F E Clements realized that the transition zones between plant communities had properties distinct from either of the adjacent communities Not until the emergence of patch dynamics theory however has central significance of the ecotone concept become apparent

An Inconstant Landscape Thomas G. Garrison,Stephen Houston,2019-01-15 Presenting the results of six years of archaeological survey and excavation in and around the Maya kingdom of El Zotz An Inconstant Landscape paints a complex picture of a dynamic landscape over the course of almost 2 000 years of occupation El Zotz was a dynastic seat of the Classic period in Guatemala Located between the renowned sites of Tikal and El Per Waka it existed as a small kingdom with powerful neighbors and serves today as a test case of political debility and strength during the height of dynastic

struggles among the Classic Maya In this volume contributors address the challenges faced by smaller polities on the peripheries of powerful kingdoms and ask how subordination was experienced and independent policy asserted Leading experts provide cutting edge analysis in varied topics and detailed discussion of the development of this major site and the region more broadly The first half of the volume contains a historical narrative of the cultural sequence of El Zotz tracing the changes in occupation and landscape use across time the second half provides deep technical analyses of material evidence including soils ceramics stone tools and bone The ever changing inconstant landscapes of peripheral kingdoms like El Zotz reveal much about their more dominant and better known neighbors An Inconstant Landscape offers a comprehensive multidisciplinary view of this important but under studied site an essential context for the study of the Classic Maya in Guatemala and a premier reference on the subject of peripheral kingdoms at the height of Maya civilization Contributors Timothy Beach Nicholas Carter Ewa Czapiewska Halliday Alyce de Carteret William Delgado Colin Doyle James Doyle Laura Gomez Jose Luis Garrido Lopez Yeny Myshell Gutierrez Castillo Zachary Hruby Melanie Kingsley Sheryl Luzzadder Beach Cassandra Mesick Braun Sarah Newman Rony Piedrasanta Edwin Román and Andrew K Scherer Routledge Handbook of Landscape and Food Joshua Zeunert, Tim Waterman, 2018-02-02 Since the turn of the millennium there has been a burgeoning interest in and literature of both landscape studies and food studies Landscape describes places as relationships and processes Landscapes create people's identities and guide their actions and their preferences while at the same time are shaped by the actions and forces of people Food as currency medium and sustenance is a fundamental part of those landscape relationships This volume brings together over fifty contributors from around the world in forty profoundly interdisciplinary chapters Chapter authors represent an astonishing range of disciplines from agronomy anthropology archaeology conservation countryside management cultural studies ecology ethics geography heritage studies landscape architecture landscape management and planning literature urban design and architecture Both food studies and landscape studies defy comprehension from the perspective of a single discipline and thus such a range is both necessary and enriching The Routledge Handbook of Landscape and Food is intended as a first port of call for scholars and researchers seeking to undertake new work at the many intersections of landscape and food Each chapter provides an authoritative overview a broad range of pertinent readings and references and seeks to identify areas where new research is needed though these may also be identified in the many fertile areas in which subjects and chapters overlap within the book General Technical Report PSW, 1978 Resources in Education, 2001-10 **State Secrecy and Security** William Walters, 2021-05-03 In **State Secrecy and Security** Refiguring the Covert Imaginary William Walters calls for secrecy to be given a more central place in critical security studies and elevated to become a core concept when theorising power in liberal democracies Through investigations into such themes as the mobility of cryptographic secrets the power of public inquiries the connection between secrecy and place making and the aesthetics of secrecy within immigration enforcement Walters challenges

commonplace understandings of the covert and develops new concepts methods and themes for secrecy and security research Walters identifies the covert imaginary as both a limit on our ability to think politics differently and a ground to develop a richer understanding of power State Secrecy and Security offers readers a set of thinking tools to better understand the strange powers that hiding revealing lying confessing professing ignorance and many other operations of secrecy put in motion It will be a valuable resource for scholars and students of security secrecy and politics more broadly
