Natural Language Processing Emily M. Bender,2022-05-31 Many NLP tasks have at their core a subtask of extracting the
 dependencies who did what to whom from natural language sentences This task can be understood as the inverse of the
 problem solved in different ways by diverse human languages namely how to indicate the relationship between different
 parts of a sentence Understanding how languages solve the problem can be extremely useful in both feature design and error
 analysis in the application of machine learning to NLP Likewise understanding cross linguistic variation can be important for
 the design of MT systems and other multilingual applications The purpose of this book is to present in a succinct and
 accessible fashion information about the morphological and syntactic structure of human languages that can be useful in
 creating more linguistically sophisticated more language independent and thus more successful NLP systems Table of
