

DINGBAT: An 8-ft.

There's some boat performance in just one half-toned water that you won't find about until you see it on display.

You can build this most-low-power watercooter on Saturday and have it in the water for a full day of boating thrills on Sunday.

By WILLIAM D. JACKSON

Small Boatman

Craft Project Project No. 103

WATER-SCOOTER riding, slalom racing, and obstacle courses—well, the old word just hasn't been the same again since you and your friends have your pick of these and other water sports with a fleet of Dingbat racers.

With motors up to 20 hp and, sometimes,

cross-bulls that are built with space-age techniques but use ordinary lumberyard materials, you can have your share of safe boating fun without getting a piece on the budget or missing another day of the boating season.

Bottom Plank is laid out for first drawing a rectangle lengthwise on a 4 x 8-ft. sheet of 1/4-in. exterior plywood (Fig. 8C). Then draw in the 22 1/2-in. bow outline, the keelson, stern, and the gun that is cut to form the plank. Use a piece of 1 x 4 lumber as a straightedge and a flexible 1/2 x 3/4-in. wooden batten to draw the curves. Bend the batten against backing rails partially driven at the layout points for the gun.

Cut the gun away with beginning at the aft corners, then moving the plank to shape. When you reach a point 8 in. from the gun, make a cut to form the edge of the panel. The remaining corners will be used while forming the plank and are not shown later. Before further assembly, rip the plank to its final width and shape as in Fig. 8D. Also cut the transoms (Fig. 10) from 2 x 4

Water-Going Motorscooter

stock and then, making a full-size paper pattern, shape to suit as a keelson.

Frame (Fig. 1). Make up the stock for the frame (Fig. 1A) by cutting 45-in. lengths of 1 x 4 and 1 x 12 with a plywood batten, using glue and 27 x 1-in. 16 (flathead) screws to secure the batten. Then lay out the keelson and locate the sides of the frame 20 1/2 in. on each side of it. Next draw the gun for the deck and locate the top of the side-plank late where this gun connects the sides of the frame. Also draw in the clearest hole for the steering drive and the 25-in. curve for the bottom of the frame. The frame is now ready to be assembled to shape.

Next lay the flat pieces for the lower frame from 2 x 4 stock and leave their outlines

on frame (Fig. 1A). Then glue these parts in place and drive 20 x 1-in. 16 screws into them through 27 frames. When finished, drill a 1/2-in. hole through the lower transoms to take the 1/2 x 1-in. steering post connecting bolt.

When the transoms and 27 frame are complete and attached as in Fig. 1, position them on the bottom plank as in Fig. 1A and trace their outlines on the plywood. Then remove them and drill four 1/2-in. holes in frame 27 around square at 1-in. intervals in the center of each outline. Coat the mating surfaces with glue and secure the parts with 27 x 1-in. 16 screws. Drive enough screws to hold the parts in place and then fasten the assembly over to drive the rest.

Cut the edge strip (Fig. 1A) to length
