The Politics of Fear

Michiel Hofman, Sokhieng Au, 2017-01-05 The 2014 2015 Ebola epidemic in West Africa was an unprecedented medical and political emergency that cast an unflattering light on multiple corners of government and international response Fear not rational planning appeared to drive many decisions made at population and leadership levels which in turn brought about a response that was as uneven as it was unprecedented entire populations were decimated or destroyed vaccine trials were fast tracked health staff died untested medications were used or not used in controversial ways humanitarian workers returned home to enforced isolation and military was employed to sometimes disturbing ends The epidemic revealed serious fault lines at all levels of theory and practice of global public health national governments were shown to be helpless and unprepared for calamity at this scale the World Health Organization was roundly condemned for its ineffectiveness the US quietly created its own African CDC a year after the epidemic began Amid such chaos Médecins sans Frontières was forced to act with unprecedented autonomy and amid great criticism in responding to the disease taking unprecedented steps in deploying services and advocating for international aid The Politics of Fear provides a primary documentary resource for recounting and learning from the Ebola epidemic Comprising eleven topic based chapters and four eyewitness vignettes from both MSF and non MSF affiliated contributors all of whom have been given access to MSF Ebola archives from Guinea Sierra Leone and Liberia for research it aims to provide a politically agnostic account of the defining health event of the 21st century so far one that will hopefully inform current opinions and future responses

The status of women in agrifood systems

Food and Agriculture Organization of the United Nations, 2023-04-13 The status of women in agrifood systems report uses extensive new data and analyses to provide a comprehensive picture of women's participation benefits and challenges they face working in agrifood systems globally The report shows how increasing women's empowerment and gender equality in agrifood systems enhances women's well being and the well being of their households creating opportunities for economic growth greater incomes productivity and resilience The report comes more than a decade after the publication of the State of food and agriculture SOFA 2010 11 Women in agriculture Closing the gender gap for development SOFA 2010 11 documented the tremendous costs of gender inequality not only for women but also for

agriculture and the broader economy and society making the business case for closing existing gender gaps in accessing agricultural assets inputs and services Moving beyond agriculture The status of women in agrifood systems reflects not only on how gender equality and women s empowerment are central to the transition towards sustainable and resilient agrifood systems but also on how the transformation of agrifood systems can contribute to gender equality and women s empowerment It provides a comprehensive analysis of the available evidence on gender equality and women s empowerment in agrifood systems that has been produced over the last decade The report also provides policymakers and development actors with an extensive review of what has worked highlighting the promise of moving from closing specific gender gaps towards the adoption of gender transformative approaches that explicitly address the formal and informal structural constraints to equality It concludes with specific recommendations on the way forward Last update 03 08 2023 *Science Fictions* Stuart Ritchie, 2020-07-21 An insider s view of science reveals why many scientific results cannot be relied upon and how the system can be reformed Science is how we understand the world Yet failures in peer review and mistakes in statistics have rendered a shocking number of scientific studies useless or worse badly misleading Such errors have distorted our knowledge in fields as wide ranging as medicine physics nutrition education genetics economics and the search for extraterrestrial life As *Science Fictions* makes clear the current system of research funding and publication not only fails to safeguard us from blunders but actively encourages bad science with sometimes deadly consequences Stuart Ritchie s own work challenging an infamous psychology experiment helped spark what is now widely known as the replication crisis the realization that supposed scientific truths are often just plain wrong Now he reveals the very human biases misunderstandings and deceptions that undermine the scientific endeavor from contamination in science labs to the secret vaults of failed studies that nobody gets to see from outright cheating with fake data to the more common but still ruinous temptation to exaggerate mediocre results for a shot at scientific fame Yet *Science Fictions* is far from a counsel of despair Rather it s a defense of the scientific method against the pressures and perverse incentives that lead scientists to bend the rules By illustrating the many ways that scientists go wrong Ritchie gives us the knowledge we need to spot dubious research and points the way to reforms that could make science trustworthy once again
