Appliance Type: Induction

#### Induction Cooking Process

- An electric voltage is applied on a conductor (coil) beneath the ceramic glass.
- This produces a high-frequency electromagnetic field. The field penetrates the metal of the ferrous (magnetic material) cooking vessel and generates heat.
- The heat generated in the cooking vessel is transferred to the vessel's contents.
- Nothing outside the vessel is affected by the field.
- As soon as the vessel is removed heat generation stops.
