Intermediate Mathematics: Book I Farhad Ghassemi Tari, Ph.D., 2024-06-06 Farhad Ghassemi Tari was born in Tehran, Iran. He currently resides in Oxnard, California. The author completed his Ph.D. program in Operations Research, applied mathematical programming, and graduated from Texas A.M. University in 1980. Right after his graduation, he started teaching at Sharif University of Technology for thirty-six years, where he retired as an associate professor. During this time, he conducted research projects and taught several undergraduate and graduate courses, mostly in mathematical programming, such as Linear Programming, Integer and Dynamic Programming, Nonlinear Programming, Sequencing and Scheduling, and Quantitative Method in Managerial Decision Making. Tari has published more than eighty papers in scientific journals and has held conference proceedings from the research results. His hobbies include reading books and listening to classical music. He also likes cooking. *Intermediate Mathematics II* is the complement book to the first in the pair, *Mathematics I*. Both texts systematically describe concepts and tools that are crucial to every college student who is willing to attain a solid base for more advanced mathematical topics. They aim to give the reader a comprehensive view of mathematics, its use, and its role in computation. These two books cooperatively may be different than other mathematics textbooks. Every chapter starts with a romantic poem. Researchers have discovered that contemplating poetic imagery and the multiple layers of meanings in poems activates specific areas of the brain that help us to interpret our everyday reality. In these books, every topic is assisted by several examples. After presentation of concepts and tools, each chapter is proceeded with different real-life applications of the topics. Finally, each chapter concludes with 60 multiple-choice questions to attract deeper learning and understanding of the topics studied.

Medicus ,1968 *The Method of Response Function in Psychology & Sociology* Irina G. Malkina-Pykh,Y. A. Pykh,2013 Social psychological and sociological systems present considerable difficulties for modellers due to their complexity multidimensionality uncertainty and irreducibility The book proposes that response functions MRF be used as a method of constructing purposeful credible and integrated social systems models from data and prior knowledge or information A semi empirical or grey box MRF model may be regarded as a trade off between a knowledge based model and a black box empirical model It may embody all the existing knowledge on the process or a part thereof and in addition it relies on parameterised functions whose parameters are determined from measurements Observations contain hidden information on the processes under consideration and one of the main purposes of the proposed method is to extract and describe these hidden relationships Parameterisation offers ways to couple qualitative with quantitative analysis This combination makes it possible to take into account all the phenomena that are not modelled with the required accuracy through prior knowledge Although only a simplified picture of the processes is modelled a grey box system model provides some insight into the system processes These processes are featured by chains of causality highlighting stressors and variables responsive to stressors The method of response functions is a nonlinear regression method that implies credible models in the sense that they are identifiable and hopefully explain system output behaviour satisfactorily For case studies the authors have selected the problems usually studied by psychologists and sociologists with statistical procedures such as investigation of variance
