

**Protein Synthesis:** Making new proteins (the hormones and enzymes) for the body. Protein synthesis occurs in two steps and in two areas of the cell. This happens because DNA cannot leave the nucleus of the cell.

**Transcription:** (writing mRNA = the message of how to make proteins); occurs in nucleus of cell

1. Part of DNA unwinds and creates mRNA (one template) in the nucleus with the help of RNA polymerase.
2. When transcribing from DNA to RNA, Thymine is replaced by Uracil.
3. Only one side of the DNA is transcribed into mRNA.
4. mRNA leaves the nucleus and travels to the ribosome in the cytoplasm.

**Translation:** (translating for an amino acid); occurs using ribosome floating in the cytoplasm of cells

5. With the help of the ribosome, mRNA is translated.
6. tRNA transfers the complementary anticodon with the amino acid attached to each codon on mRNA.
7. Polypeptide chain is created where each amino acid is joined by a peptide bond = protein.
8. Protein either stays in the cell or gets packaged.

#### Quick Practice

DNA Sequence: T A C - C A A - T G T - C A G - A T A - A T C - T A C - G A T - A A A - T G A - A T C

mRNA codons: \_\_\_\_\_

tRNA anticodons: \_\_\_\_\_

Amino Acid Sequence = Protein (use mRNA codon and the chart below to find the amino acid)

The Genetic Code

READ the mRNA codon, NOT the tRNA anticodon, to find the amino acid!  
 Note how UAC (codon) = Tyr (amino acid) and ACG (codon) = Ser (amino acid)

**Cyber Resilience: Applied Perspectives** Igor Linkov, Alexander Kott, 2025-07-16 Resilience is defined as the ability to recover from or easily adapt to shocks and stresses Resilience unlike the concept of security which is often and incorrectly conflated with resilience refers to the system's ability to recover or regenerate its performance after an unexpected impact produces a degradation in its performance A clear understanding of distinction between security risk and resilience is important for developing appropriate management of cyber threats This book draws expertise from academia industry and government to present insightful discussion of the fundamental concepts of cyber resilience including the most current technical issues relevant methods and procedures and recent developments of the field This book offers greater emphasis on applying the concepts and methods of cyber resilience to practical problems as compared to our previous book The bulk of the material is presented in a logical consistent and continuous way that is easily accessible to non specialists and will be of use as teaching material as well as source of emerging scholarship in the field

From Sequences to Graphs Annie Chateau, Mikaël Salson, 2022-09-08 In order to study living organisms scientists not only study them at an overall macroscopic scale but also on a more detailed microscopic scale This observation pushed to its limits consists of investigating the very center of each cell where we find the molecules that determine the way it functions DNA deoxyribonucleic acid and RNA ribonucleic acid In an organism DNA carries the genetic information which is called the genome It is represented as four letter sequences using the letters A C G and T based on these sequences computer methods

described in this book can answer fundamental questions in bioinformatics This book explores how to quickly find sequences of a few hundred nucleotides within a genome that may be made up of several billion how to compare those sequences and how to reconstruct the complete sequence of a genome It also discusses the problems of identifying bacteria in a given environment and predicting the structure of RNA based on its sequence

March 2018      **Computational Systems Biology of Pathogen-Host Interactions** Saliha Durmuş,Tunahan Çakır,Reinhard Guthke,Emrah Nikerel,Arzucan Özgür,2016-05-30 A thorough understanding of pathogenic microorganisms and their interactions with host organisms is crucial to prevent infectious threats due to the fact that Pathogen Host Interactions PHIs have critical roles in initiating and sustaining infections Therefore the analysis of infection mechanisms through PHIs is indispensable to identify diagnostic biomarkers and next generation drug targets and then to develop strategic novel solutions against drug resistance and for personalized therapy Traditional approaches are limited in capturing mechanisms of infection since they investigate hosts or pathogens individually On the other hand the systems biology approach focuses on the whole PHI system and is more promising in capturing infection mechanisms Here we bring together studies on the below listed sections to present the current picture of the research on Computational Systems Biology of Pathogen Host Interactions Computational Inference of PHI Networks using Omics Data Computational Prediction of PHIs Text Mining of PHI Data from the Literature Mathematical Modeling and Bioinformatic Analysis of PHIs Computational Inference of PHI Networks using Omics Data Gene regulatory metabolic and protein protein networks of PHI systems are crucial for a thorough understanding of infection mechanisms Great advances in molecular biology and biotechnology have allowed the production of related omics data experimentally Many computational methods are emerging to infer molecular interaction networks of PHI systems from the corresponding omics data Computational Prediction of PHIs Due to the lack of experimentally found PHI data many computational methods have been developed for the prediction of pathogen host protein protein interactions Despite being emerging currently available experimental PHI data are far from complete for a systems view of infection mechanisms through PHIs Therefore computational methods are the main tools to predict new PHIs To this end the development of new computational methods is of great interest Text Mining of PHI Data from Literature Despite the recent development of many PHI specific databases most data relevant to PHIs are still buried in the biomedical literature which demands for the use of text mining techniques to unravel PHIs hidden in the literature Only some rare efforts have been performed to achieve this aim Therefore the development of novel text mining methods specific for PHI data retrieval is of key importance for efficient use of the available literature Mathematical Modeling and Bioinformatic Analysis of PHIs After the reconstruction of PHI networks experimentally and or computationally their mathematical modeling and detailed computational analysis is required using bioinformatics tools to get insights on infection mechanisms Bioinformatics methods are increasingly applied to analyze the increasing amount of experimentally found and computationally predicted PHI data
