The Making of Law Bruno Latour, 2013-04-26 In this book Bruno Latour pursues his ethnographic inquiries into the different value systems of modern societies After science technology religion art it is now law that is being studied by using the same comparative ethnographic methods The case study is the daily practice of the French supreme courts the Conseil d'Etat specialized in administrative law the equivalent of the Law Lords in Great Britain Even though the French legal system is vastly different from the Anglo American tradition and was created by Napoleon Bonaparte at the same time as the Code based system this branch of French law is the result of a home grown tradition constructed on precedents Thus even though highly technical the cases that form the matter of this book are not so exotic for an English speaking audience What makes this study an important contribution to the social studies of law is that because of an unprecedented access to the collective discussions of judges Latour has been able to reconstruct in detail the weaving of legal reasoning it is clearly not the social that explains the law but the legal ties that alter what it is to be associated together It is thus a major contribution to Latour's social theory since it is now possible to compare the ways legal ties build up associations with the other types of connection that he has studied in other fields of activity His project of an alternative interpretation of the very notion of society has never been made clearer than in this work To reuse the title of his first book this book is in effect the Laboratory Life of Law

Variability of Air Temperature and Atmospheric Precipitation in the Arctic Rajmund Przybylak, 2006-04-11 It has been known at least since the end of the century that the polar areas play a very important role in the formation of the Earth's climates It is also known today that they are the most sensitive regions to climatic change and are thus perfect case studies for the detection of such changes The most serious obstacle to the study of climatic and other geographical elements of the polar areas including the

Arctic has always been the severe climatic conditions which prevail in these regions. Because of these extreme conditions, research into particular elements of the climatic system including the atmosphere began here much later than it did in lower latitudes. For instance, the whole area of the Arctic was not sufficiently covered with a network of meteorological stations until the late 1940s, and even then there were large areas of the central Arctic and the Greenland interior for which no data were available. This is probably why it was not until the start of the 1990s that a body of work began to appear which analysed in any depth climatic variability for the Arctic as a whole. While a considerable number of papers had been published before this period, most of them were local studies presenting highly localised information providing air temperature measurements but often little else.

**Handbook of Research on Race, Gender, and the Fight for Equality** Prescott, Julie, 2016-03-31  
Diversity in the workforce can be attributed to both a popular cultural shift and legislative intervention. Despite these forces, discrimination endures in all aspects of Western society, from education to employment. Unequal pay and opportunities for promotion are symptoms of a systematic discrimination of individuals based on race and gender. The Handbook of Research on Race, Gender, and the Fight for Equality provides a critical look at race, gender, and modern-day discrimination. Focusing on workplace and educational dynamics, the research found within this book addresses equal opportunity and diversity requirements from a myriad of perspectives. This book is an essential reference source for professionals and researchers working in equality, as well as managers and those in leadership roles.

**The Changing Topography of EU Administration** Didier Georgakakis, 2024-12-25  
This book examines the ways in which the European Union's administrative structures have changed over the last decade in response to several significant political events, including Brexit, the refugee crisis, and the Covid-19 pandemic. Whilst much has been written about the responses to these events at both national and European level, less attention has been given to the internal transformations they have brought about within the EU's institutions. Multidisciplinary in approach, the book brings together leading scholars to assess the ways in which key organizations such as the European Council, the European Parliament, and

the European Central Bank have changed over the last ten years It also throws light on the impact these events have had on policy actors within the EU administrative system as well as its policy processes It will appeal to all those interested in European public administration political sociology European politics and EU studies
