Design Guideline Basal Reinforced Piled Embankments Suzanne J.M. van

Eekelen, Marijn H.A. Brugman, 2016-09-01 A basal reinforced piled embankment consists of a reinforced embankment on a pile foundation The reinforcement consists of one or more horizontal layers of geosynthetic reinforcement installed at the base of the embankment A basal reinforced piled embankment can be used for the construction of a road or a railway when a traditional construction method would require too much construction time affect vulnerable objects nearby or give too much residual settlement making frequent maintenance necessary This publication is a guideline CUR226 for the design of basal reinforced piled embankments The guideline covers the following subjects a survey of the requirements and the basic principles for the structure as a whole some instructions for the pile foundation and the pile caps design rules for the embankment with the basal geosynthetic reinforcement extensive calculation examples finite element calculations construction details and management and maintenance of the piled embankment The guideline includes many practical tips The design guideline is based on state of the art Dutch research which was conducted in cooperation with many researchers from different countries

Engineering of Glacial Deposits Barry G. Clarke, 2017-07-14 At some time 30% of the world's land mass was covered by glaciers leaving substantial deposits of glacial soils under major conurbations in Europe North and South America New Zealand Europe and Russia For instance 60% of the UK has been affected leaving significant glacial deposits under major conurbations where two thirds of the population live Glacial soils are composite soils with significant variations in composition and properties and are recognised as challenging soils to deal with Understanding the environment in which they were formed and how this affects their behaviour are critical because they do not always conform to classic theories of soil mechanics This book is aimed at designers and contractors working in the construction and extractive industries to help them mitigate construction hazards on with or in glacial deposits These soils increase risks to critical infrastructure which in the UK includes the majority of the road and rail network coastal defences such as the fastest eroding coastline in Europe and most of the water supply reservoirs It brings together many years of experience of research into the behaviour of glacial deposits drawing upon published and unpublished case studies from industry It draws on recent developments in understanding of the geological processes and the impact they have upon the engineering properties construction processes and performance of geotechnical structures Unlike other books on glaciation it brings together all the relevant disciplines in earth sciences and engineering to make it directly relevant to the construction industry
