The global energy industry is huge and it is in disarray between low oil and gas prices, climate change, rising development costs, and ever-mounting regulations. The need for change has been made crystal clear, but planning is much easier than implementation and stasis is not progress. This book shows how redesigning internal operating models can bring about the necessary change in the implementation of upstream capabilities-driven strategies. From integrated national major and independent oil companies to the service companies in the upstream supply chain, there isn't an enterprise in the sector that cannot benefit from reduced costs and increased efficiency. Knowing that change is necessary is not enough; this book shows you what to change and how to change it to get off the treadmill and start moving forward. With expert guidance through each redesign element, this insightful guide provides more than simply ideas; it provides real practical guidance on transforming operations to keep pace with the changes and create lasting advantage. Identify the most relevant organizational capabilities for your resource portfolio as well as the changes that can translate into savings and efficiency. Build a workable plan for real-world implementation. Redesign the operating model most suited to the needs of your business on an organization-wide basis.
