Varieties of Scientific Realism Evandro Agazzi,2017-03-08 This book offers a comprehensive update on the scientific realism debate enabling readers to gain a novel appreciation of the role of objectivity and truth in science and to understand fully the various ways in which antirealist conceptions have been subjected to challenge over recent decades Authoritative representatives of different philosophical traditions explain their perspectives on the meaning and validity of scientific realism and describe the strategies being adopted to counter persisting antirealist positions The coverage extends beyond the usual discussion of realism within the context of the natural sciences and especially physics to encompass also its applicability in mathematics logic and the human sciences The book will appeal to all with an interest in the recent realist epistemologies of science the nature of current philosophical debate and the ongoing rehabilitation of truth as the legitimate goal of scientific research Dao Companion to ZHU Xi's Philosophy Kai-chiu Ng,Yong Huang,2020-03-04 Zhu Xi 1130-1200 has been commonly and justifiably recognized as the most influential philosopher of Neo Confucianism a revival of classical Confucianism in face of the challenges coming from Daoism and more importantly Buddhism His place in the Confucian tradition is often and also very plausibly compared to that of Thomas Aquinas slightly later in the Christian tradition This book presents the most comprehensive and updated study of this great philosopher It situates Zhu Xi s philosophy in the historical context of not only Confucian philosophy but also Chinese philosophy as a whole Topics covered within Zhu Xi s thought are metaphysics epistemology ethics political philosophy hermeneutics philosophy of religion moral psychology and moral education This text shows both how Zhu Xi responded to earlier thinkers and how his thoughts resonate in contemporary philosophy particularly in the analytic tradition This companion will appeal to students researchers and educators in the field **Aspects of Time for Recognizing Human Activities** Nouredien Hussein,2020-12-01 This thesis contributes to the literature of understanding and recognizing human activities in videos More specifically the thesis draw line between short range atomic actions and long range complex activities For the classification of the latter the mainstream approach in literature is to divide the activity into a handful of short segments called atomic actions Then a neural model

such as 3D CNN is trained to represent and classify each segment independently Then the activity level classification probability scores are obtained by pooling over that of the segments Differently this work argues that long range activities are better classified in full That is to say the neural model has to reason about the long range activity all at once to better recognize it Based on this argument the thesis proposes different methods and neural network models for recognizing these complex activities

A Medieval Songbook Elizabeth Eva Leach, Joseph W. Mason, Matthew P. Thomson, 2022 Detailed exploration of an enigmatic manuscript containing the texts to hundreds of songs but no musical notation The medieval songbook known variously as *trouv re* manuscript C or the Bern Chansonnier Bern Burgerbibliothek Cod 389 is one of the most important witnesses to musical life in thirteenth century France Almost certainly copied in Metz it provides the texts to over five hundred Old French songs and is a unique insight into cultures of song making and copying on the linguistic and political borders between French and German speaking lands in the Middle Ages Notably the names of *trouv res* including several female poet musicians are found in its margins names which would be unknown today without this evidence However the manuscript has received relatively little scholarly attention partly because the songs musical staves remained empty for reasons now unknown and partly because of where it was copied This collection of essays is the first to consider C on its own terms and from a range of disciplinary perspectives including philology art history literary studies and musicology The contributors explore the process of creating the complex object that is a music manuscript examining the work of the scribes and artists who worked on C and questioning how scribes acquired and organised exemplars for copying The peculiarly Messine flavour of the repertoire and authors is also discussed with contributors showing that C frames the tradition of Old French song from a unique perspective As a whole the volume demonstrates how in this eastern hub of music and poetry poet composers readers and scribes interacted with the courtly song tradition in fascinating and unusual ways

Quantum Structures in Cognitive and Social Science Diederik Aerts, Jan Broekaert, Liane Gabora, Sandro Sozzo, 2016-06-26 Traditional approaches to cognitive psychology correspond with a classical view of logic and probability theory More specifically one typically assumes that cognitive processes of human thought are founded on the Boolean structures of classical logic while the probabilistic aspects of these processes are based on the Kolmogorovian structures of classical probability theory However growing experimental evidence indicates that the models founded on classical structures systematically fail when human decisions are at stake These experimental deviations from classical behavior have been called paradoxes fallacies effects or contradictions depending on the specific situation where they appear But they involve a broad spectrum of cognitive and social science domains ranging from conceptual combination to decision making under uncertainty behavioral economics and linguistics This situation has constituted a serious drawback to the development of various disciplines like cognitive science linguistics artificial intelligence economic modeling and behavioral finance A different approach to cognitive psychology initiated two decades ago has meanwhile matured into a new domain of research called quantum

cognition Its main feature is the use of the mathematical formalism of quantum theory as modeling tool for these cognitive situations where traditional classically based approaches fail Quantum cognition has recently attracted the interest of important journals and editing houses academic and funding institutions popular science and media Specifically within a quantum cognition approach one assumes that human decisions do not necessarily obey the rules of Boolean logic and Kolmogorovian probability and can on the contrary be modeled by the quantum mechanical formalism Different concrete quantum theoretic models have meanwhile been developed that successfully represent the cognitive situations that are classically problematical by explaining observed deviations from classicality in terms of genuine quantum effects such as contextuality emergence interference superposition entanglement and indistinguishability In addition the validity of these quantum models is convincingly confirmed by new experimental tests We also stress that since the use of a quantum theoretic framework is mainly for modeling purposes the identification of quantum structures in cognitive processes does not presuppose without being incompatible with it the existence of microscopic quantum processes in the human brain In this Research Topic we review the major achievements that have been obtained in quantum cognition by providing an accurate picture of the state of the art of this emerging discipline Our overview does not pretend to be either complete or exhaustive But we aim to introduce psychologists and social scientists to this challenging new research area encouraging them at the same time to consider its promising results It is our opinion that if continuous progress in this domain can be realized quantum cognition can constitute an important breakthrough in cognitive psychology and potentially open the way towards a new scientific paradigm in social science

inputs during the annual budget cycle Given that no international standards or guidelines have been established for budget literacy education to date this book seeks to address this gap by taking stock of illustrative initiatives promoting budget literacy for youth in selected countries The underlying presumption is that when supply side actors in the budget process governments simplify and disseminate budget information for demand side actors citizens this information will then be used by citizens to provide feedback on the budget However since citizens are often insufficiently informed about public budgets to constructively participate in budget processes one way to empower them and to remedy the problem of budget illiteracy is to provide budget literacy education in schools to youth helping them evolve into civic minded adults with the essential knowledge needed for analyzing their government's fiscal policy objectives and measures and the confidence and sense of social responsibility to participate in the oversight of public resources This book elaborates on approaches learning outcomes pedagogical strategies and assessment approaches for budget literacy education and presents lessons that are relevant for the development improvement or scaling up of budget literacy initiatives

The Roll in England and France in the Late Middle Ages Stefan G. Holz, Jörg Peltzer, Maree Shirota, 2019-12-16 In the Middle Ages rolls were ubiquitous as a writing support While scholars have long examined the texts and images on rolls they have rarely taken the manuscripts themselves into account This volume readdresses this imbalance by focusing on the materiality and various usages of rolls in late medieval England and France Researchers from England France Germany and Singapore demonstrate in 11 contributions how this approach can increase our understanding of the rolls and their contents as well as the contexts in which they were produced and used
