

Sample Essay

The following winning essay was submitted in 2009 by a UK higher education student for an essay writing competition sponsored by the *LearnHigher* Centre of Excellence in Teaching and Learning (CETL) network. The set title was **'What is the point of referencing?'**, and there was a maximum word limit of 1,500 words.

There is a tutor commentary on the points made by the student to the left of the essay.

The introduction to an essay is very important. Here the student immediately addresses the question.

What is the point of referencing?

The reasons why accurate referencing is essential for academic work are not immediately apparent, particularly for students new to higher education. This essay will, therefore, examine why referencing is an essential part of academic writing and in the process address the question: 'what is the point of referencing?'

The student introduces the main reasons for referencing.

There are three main reasons for referencing. Firstly, referencing helps student writers to construct, structure, support and communicate arguments. Secondly, references link the writer's work to the existing body of knowledge. Thirdly, only through referencing can academic work gain credibility.

Summarises the structure of the essay.

This essay will discuss these three aspects of referencing in detail, examine their validity, identify how referencing affects a writer's writing style, and show how referencing helps students to present their own ideas and opinions in assignments.

Engages with the first of the reasons for referencing: construction of arguments. The student draws on the work of a published writer (Becker) in support of the four points made.

Becker (1986) believes the construction of arguments is the most important function of referencing systems. There are four dimensions to this. Firstly, drawing on existing literature, academic writers can construct their own arguments - and adopting a referencing system supports this process. Secondly, it helps to structure the existing information and arguments by linking published authors to their respective works. Third, referencing helps academic writers identify sources, gather evidence, as well as show the relationships between existing knowledge. Finally, referencing also provide a framework to

Note the systematic way the ideas are presented: 'Firstly...; Secondly...; Thirdly...; Finally'.

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post-publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e.g. should rating averages come with error bars How should the evaluative information about each paper e.g. peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e.g. weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on

community based open evaluation We hope that these papers will provide a starting point
