*Identification of Flavonoids* Tom Mabry, K. R. Markham, M. B. Thomas, 2012-12-06 About 1958 the late Professor R E ALSTON and Professor B L TURNER both of the Department of Botany The University of Texas at Austin initiated a general systematic

investigation of the legume genus *Baptisia*. They found that flavonoid patterns as revealed by two dimensional paper chromatography were valid criteria for the recognition of the *Baptisia* species and for the documentation of their numerous natural hybrids. Later they showed that the flavonoid chemistry could be used for the analysis of gene flow among populations. At that time no attempt was made to even partially identify the flavonoids which were detected chromatographically. Nevertheless it soon became apparent that the full value of the chemical data for systematic purposes required knowledge of the structures of the flavonoids. In 1962 one of us T J M in collaboration with Drs ALSTON and TURNER began the chemical analysis of the more than 60 flavonoids which had been chromatographically detected in the 16 *Baptisia* species. In the intervening years a number of chemists and botanists including Drs K BAETCKE B BREHM M CRANMER D HORNE J KAGAN B KROSCHEWSKY J MCCLURE H R SLER and J WALLACE participated in the development of techniques and procedures for the rapid identification of known flavonoids and in the structure determination of new flavonoids. In addition the flavonoid chemistry of many plants other than *Baptisia* was investigated.

Foods that contain high amounts of flavonoids include blueberries, red beans, cranberries and blackberries. Many other foods including red and yellow fruits and vegetables and some nuts as well as red wine and certain teas are also rich in flavonoids. Due to the potential health benefits research into flavonoids and their potential beneficial effects on human health continues unabated. *Dictionary of Flavonoids with downloadable resources* lists all known flavonoids approximately 13 000 in a single volume. It details chemical structures, physical properties and biological source and also includes a concise bibliography. Derived from the well respected *Dictionary of Natural Products* it is presented in a compact dictionary format and is an invaluable reference source for all those working in this area.
