

different ways to understand how to solve problems about time.

Sadie spends $1\frac{1}{2}$ hours doing homework. She plays outside for 20 minutes and practices the piano for a quarter of an hour. How many more minutes does Sadie spend doing homework than practicing the piano and playing outside?

TRY IT Draw a bar model to solve time comparison problems.

Use the bar model to show the amount of time that Sadie spends doing homework, playing outside, and practicing the piano. Draw a bar from the end of those two bars to represent how much more time she spends doing homework. Show all the times in minutes.

Use the bar model to write an equation to solve the problem.

$$\text{homework minutes} = (\text{playing} + \text{practicing}) \text{ minutes} + \text{how many more homework minutes}$$

How many minutes does Sadie spend on homework, playing outside, and practicing the piano? How much more time does Sadie spend on homework, h , is unknown.

$$90 = 20 + 15 + h$$

CONNECT IT

Now you will use the problem from the previous page to help you understand how to solve problems about time by converting units of time and using equations. Use the Math Reference Sheet as necessary.

- 1 Look at the bar model in the first Model It. Why do you think the amount of time Sadie does her homework and practices piano changed to a number of minutes?
- 2 How much time does Sadie spend doing homework?
- 3 How much time does Sadie spend playing outside and practicing the piano?
- 4 Write and solve another equation to model the situation. Use the time Sadie spends doing homework and the total time Sadie spends practicing the piano and playing outside that you found in problems 2 and 3.
- 5 Look back at the equation at the bottom of the previous page. How is that equation similar to or different from the equation you wrote in problem 4?

REFLECT

Look back at your Try It, strategies by classmates, and Model Its. Which models or strategies do you like best for solving multi-step problems about time? Explain.
