| Digital input                                  | [X1]      | Digital input 1     | <p>(1) The various signals such as "Coast to a stop," "Enable external alarm trip," and "Select multistep frequency" can be assigned to terminals [X1] to [X3], [FWD] and [REV] by setting function codes E01 to E03, E98, and E99. For details, refer to Chapter 5, Section 5.2 "Details of Function Codes."</p> <p>(2) Input mode, i.e. Sink/Source, is changeable by using the internal jumper switch.</p> <p>(3) Switches the logic value (1/0) for ON/OFF of the terminals between [X1] to [X3], [FWD] or [REV], and [CM]. If the logic value for ON between [X1] and [CM] is 1 in the normal logic system, for example, OFF is 1 in the negative logic system and vice versa.</p> <p>(4) The negative logic signaling cannot be applicable to [FWD] and [REV].</p> <p>Digital input circuit specifications</p> <div></div> |      |  |      |      |                          |          |     |     |           |      |      |                            |          |      |      |           |     |     |                                                |  |        |      |                                  |  |   |        |
