Application Administrators Handbook Kelly C Bourne,2013-09-16 An Application Administrator installs updates

optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party but they may have been developed internally. Examples of application types include Enterprise Resource Planning (ERP), Customer Resource Management (CRM), and Point of Sale (POS), legal contract management, time tracking, accounts payable/receivable, payroll, SOX compliance, tracking, budgeting, forecasting, and training. In many cases, the organizations are absolutely dependent that these applications be kept running. The importance of Application Administrators and the level to which organizations depend upon them is easily overlooked. Application Administrator's Handbook provides both an overview of every phase of administering an application from working with the vendor prior to installation, the installation process itself, importing data into the application, handling upgrades, working with application users to report problems, scheduling backups, automating tasks that need to be done on a repetitive schedule, and finally retiring an application. It provides detailed hands-on instructions on how to perform many specific tasks that an Application Administrator must be able to handle. Learn how to install, administer, and maintain key software applications throughout the product life cycle. Get detailed hands-on instructions on steps that should be taken before installing or upgrading an application to ensure continuous operation. Identify repetitive tasks and find out how they can be automated, thereby saving valuable time. Understand the latest on government mandates and regulations such as privacy, SOX, HIPAA, PCI, and FISMA, and how to fully comply.
