Attitude Measurements in Science Education Dr. Myint Swe Khine, 2015-04-01 The research into how students attitudes affect learning of science related subjects have been one of the core areas of interest by science educators The development in science education records various attempts in measuring attitudes and determining the correlations between behaviour achievements career aspirations gender identity and cultural inclination Some researchers noted that attitudes can be learned and teachers can encourage students to like science subjects through persuasion But some view that attitude is situated in context and it is much to do with upbringing and environment The critical role of attitude is well recognized in advancing science education in particular designing curriculum and choosing powerful pedagogies and nurturing students Since Noll 1935 seminal work on measuring the scientific attitudes a steady stream of research papers that describe development and validation of scales appear in scholarly publications Despite these efforts the progress in this area has been stagnated by limited understanding of the conception about attitude dimensionality and inability to determine the multitude of variables that made up such concept This book makes an attempt to take stock and critically examine the classical views on science attitudes and explore the contemporary attempts in measuring science related attitudes The chapters in this book are reflection of researchers who work tirelessly in promoting science education and will illuminate the current trends and future scenarios in attitude measurement

Standard Setting in Education Sigrid Blömeke, Jan-Eric Gustafsson, 2017-02-27 This book summarizes the international evidence on methodological issues in standard setting in education By critically discussing the standard setting practices implemented in the Nordic countries and by presenting new methodological approaches it offers fresh perspectives on the current research Standard setting targets crucial societal objectives by defining educational benchmarks at different achievement levels and provides feedback to policy makers schools and teachers about the strengths and weaknesses of a school system Given that the consequences of standard setting can be dramatic the quality of standard setting is a prime concern If it fails repercussions can be expected in terms of arbitrary evaluations of educational policy wrong turns in school or teacher development or misplacement of individual students Standard setting therefore needs to be accurate reliable valid

useful and defensible However specific evidence on the benefits and limits of different approaches to standard setting is rare and scattered and there is a particular lack with respect to standard setting in the Nordic countries where the number of national tests is increasing and there are concerns about the time and effort spent on testing at schools without feedback being provided Addressing this gap the book offers a discussion on standard setting by respected experts as well as profound and innovative insights into fundamental aspects of standard setting including conclusions for future methodological and policy related research

Primary Science Education in East Asia Yew-Jin Lee, Jason Tan, 2018-09-26. This edited volume is a state of the art comparison of primary science education across six East Asian regions, namely the People's Republic of China, Republic of Korea, Republic of China, Hong Kong SAR, Japan, and Singapore. While news of educational policies, classroom teaching, assessment, and other educational innovations here often surface in the international media, this book brings together for the first time relevant information regarding educational systems and strategies in primary science in East Asia. Above all, it is a readable yet comprehensive survey; readers would have an accurate sense of what has been accomplished, what has not worked so well, and what remains to be done. Invited experts in comparative education research and/or science education also provide commentary by discussing common themes across the six regions. These types of critical synoptic reviews add much value by enabling readers to understand broad commonalities and help synthesize what must surely be a bewildering amount of very interesting, albeit confusing, body of facts, issues, and policies. Education in East Asia holds many lessons, both positive and negative, to offer to the rest of the world, to which this volume is a timely contribution to the literature.
