Solving the Internet Jurisdiction Puzzle Dan Jerker B. Svantesson,2017 Internet jurisdiction has emerged as one of the greatest and most urgent challenges online affecting areas as diverse as e commerce data privacy law enforcement content take downs cloud computing e health cyber security intellectual property freedom of speech and cyberwar In this innovative

book Professor Svantesson presents a vision for a new approach to Internet jurisdiction based on an extensive period of research dedicated to the topic The book demonstrates that our current paradigm remains attached to territorial thinking that is out of sync with our modern world especially but not only online Having made the claim that our adherence to the territoriality principle is based more on habit rather than on any clear and universally accepted legal principles Professor Svantesson advances a new jurisprudential framework for how we approach jurisdiction a framework that unites private and public international law He also proposes several other reform initiatives aimed at equipping us to solve the Internet jurisdiction puzzle In addition the book provides a history of Internet jurisdiction and challenges our traditional categorisation of different types of jurisdiction It places Internet jurisdiction in a broader context and outlines methods for how to properly understand and work with rules of Internet jurisdiction While Solving the Internet Jurisdiction Puzzle paints a clear picture of the concerns involved and the problems that needs to be overcome this book is distinctly aimed at finding practical solutions anchored in a solid theoretical framework Professor Svantesson argues that many of the Internet jurisdiction problems we face are due to a sleepwalking like acceptance of orthodox thinking Solving the Internet Jurisdiction Puzzle acts as a wake up call to this issue

Creating

Smart Enterprises Vivek Kale, 2017-10-25 Vivek Kale's *Creating Smart Enterprises* goes smack dab at the heart of harnessing technology for competing in today's chaotic digital era. Actually for him it's SMAC (Social media, Mobile Analytics and big data, Cloud computing and Internet of Things technologies). This book is required reading for those that want to stay relevant and win and optional for those that don't. Peter Fingar, Author of *Cognitive Computing and business technology consultant*. *Creating Smart Enterprises* unravels the mystery of social media, mobile analytics and big data, cloud and Internet of Things SMAC computing and explains how it can transform the operating context of business enterprises. It provides a clear understanding of what SMAC really means, what it can do for smart enterprises and application areas where it is practical to use them. All IT professionals who are involved with any aspect of a SMAC computing project will profit by using this book as a roadmap to make a more meaningful contribution to the success of their computing initiatives. This pragmatic book introduces the VUCA (volatility, uncertainty, complexity and ambiguity) business ecosystem confronted by the businesses today. Describes the challenges of defining business and IT strategies and of aligning them as well as their impact on enterprise governance. Provides a very wide treatment of the various components of SMAC computing including the Internet of Things (IoT) and its constituting technologies like RFID, wireless networks, sensors and wireless sensor networks (WSNs). This book addresses the key differentiator of SMAC computing environments and solutions that combine the power of an elastic infrastructure with analytics. The SMAC environment is cloud based and inherently mobile. Information management processes can analyze and discern recurring patterns in colossal pools of operational and transactional data. Analytics, big data and IoT computing leverage and transform these data patterns to help create successful smart enterprises.

Big Data Computing Vivek Kale, 2016-11-25 This book unravels the mystery of Big Data computing and its power to transform business operations. The approach it uses will be helpful to any professional who must present a case for realizing Big Data computing solutions or to those who could be involved in a Big Data computing project. It provides a framework that enables business and technical managers to make optimal decisions necessary for the successful migration to Big Data computing environments and applications within their organizations.
