Networking for Big Data Shui Yu, Xiaodong Lin, Jelena Misic, Xuemin (Sherman) Shen, 2015-07-28 Networking for Big Data supplies an unprecedented look at cutting edge research on the networking and communication aspects of Big Data Starting with a comprehensive introduction to Big Data and its networking issues it offers deep technical coverage of both theory and applications The book is divided into four sections introduction to Big Data **LAN-Switching and Wireless** Wayne Lewis, 2009 **Anomaly-Detection and Health-Analysis Techniques for Core Router Systems** Shi Jin, Zhaobo

Zhang, Krishnendu Chakrabarty, Xinli Gu, 2019-12-19 This book tackles important problems of anomaly detection and health status analysis in complex core router systems integral to today's Internet Protocol IP networks. The techniques described provide the first comprehensive set of data driven resiliency solutions for core router systems. The authors present an anomaly detector for core router systems using correlation based time series analysis which monitors a set of features of a complex core router system. They also describe the design of a changepoint based anomaly detector such that anomaly detection can be adaptive to changes in the statistical features of data streams. The presentation also includes a symbol based health status analyzer that first encodes as a symbol sequence the long term complex time series collected from a number of core routers and then utilizes the symbol sequence for health analysis. Finally the authors describe an iterative self learning procedure for assessing the health status. Enables Accurate Anomaly Detection Using Correlation Based Time Series Analysis. Presents the design of a changepoint based anomaly detector. Includes Hierarchical Symbol based Health Status Analysis. Describes an iterative self learning procedure for assessing the health status. Smart Grid and Internet of Things Al-Sakib Khan Pathan, Zubair Md. Fadlullah, Mohamed Guerroumi, 2018-12-29 This book constitutes the refereed proceedings of the Second EAI International Conference on Smart Grid and Internet of Things SGIoT 2018 held in Niagara Falls Canada Ontario in July 2018. The 14 papers presented were carefully reviewed and selected from 25 submissions and present research results on how to achieve more efficient use of resources based largely on IoT based machine to machine interactions in the smart grid communication networks. The smart grid also encompasses IoT technologies which monitor transmission lines manage substations integrate renewable energy generation e.g. solar or wind and utilize hybrid vehicle batteries. Through these technologies the authorities can smartly identify outage problems and intelligently schedule the power generation and delivery to the customers. **Encyclopedia of Information Science and Technology, Fifth Edition** Khosrow-Pour D.B.A., Mehdi, 2020-07-24 The rise of intelligence and computation within technology has created an eruption of potential applications in numerous professional industries. Techniques such as data analysis, cloud computing, machine learning and others have altered the traditional processes of various disciplines including healthcare, economics, transportation and politics. Information technology in today's world is beginning to uncover opportunities for experts in these fields that they are not yet aware of. The exposure of specific instances in which these devices are being implemented will assist other specialists in how to successfully utilize these transformative tools with the appropriate amount of discretion, safety and awareness. Considering the level of diverse uses and practices throughout the globe, the fifth edition of the Encyclopedia of Information Science and Technology series continues the enduring legacy set forth by its predecessors as a premier reference that contributes the most cutting edge concepts and methodologies to the research community. The Encyclopedia of Information Science and Technology Fifth Edition is a three volume set that includes 136 original and previously unpublished research chapters that present multidisciplinary research and expert insights into new methods and processes for understanding modern

technological tools and their applications as well as emerging theories and ethical controversies surrounding the field of information science Highlighting a wide range of topics such as natural language processing decision support systems and electronic government this book offers strategies for implementing smart devices and analytics into various professional disciplines The techniques discussed in this publication are ideal for IT professionals developers computer scientists practitioners managers policymakers engineers data analysts and programmers seeking to understand the latest developments within this field and who are looking to apply new tools and policies in their practice Additionally academicians researchers and students in fields that include but are not limited to software engineering cybersecurity information technology media and communications urban planning computer science healthcare economics environmental science data management and political science will benefit from the extensive knowledge compiled within this publication
