Practitioner's Guide to Developmental and Psychological Testing Glen P.

Aylward, 2013-06-29 The practice of primary health care has expanded beyond the traditional medical model Primary care physicians and allied professionals are called upon more frequently to address parental concerns about developmental delays poor school performance or behavioral problems As a result pediatricians family practitioners pediatric nurses social workers and speech language specialists are faced with the issue of developmental and psychological testing The degree of the clinician's involvement in testing varies from interpretation of reports to performing screening or assessments In many cases the primary health care professional assumes the role of case manager Unfortunately cooperation between disciplines often has been limited because of poor communication particularly in regard to developmental and psychological testing where acronyms statistics and jargon abound Even professionals from mental health disciplines such as child psychiatrists or

psychiatric social workers sometimes are overwhelmed The purpose of this book therefore is to provide the clinician with practical information regarding developmental and psychological testing thereby making the health care professional an educated consumer This text does not simply describe how psychologists perform testing rather it provides information to help clinicians understand what the tests contain what their strengths and limitations are and how they can be incorporated into practice

Case Studies in Communication Disorders Louise Cummings, 2016-10-06 This is a collection of 48 highly useful case studies of children and adults with communication disorders

New Directions In Language Development And Disorders Michael Perkins, Sara Howard, 2012-12-06 Research into child language development is being conducted more extensively by more people and in more countries throughout the world than at any point in the past We now know more than we ever did before about the linguistic cognitive neurobiological and social capacities that children bring to their language learning task as well as the ways in which these capacities interact with a whole range of factors present in the child's environment throughout the learning process not least the particular characteristics of the language or languages to which the child is exposed Far from inducing a sense of complacency this new knowledge seems instead to create an even stronger impetus to know more This is partly because of the new and unforeseen questions it raises and partly because of competition between different theories to provide the best explanation of the phenomenon and which in turn engender different methods of enquiry This volume addresses many of the key issues which are currently exercising the minds of child language researchers and which are likely to motivate research for some years to come The chapters included here all previously unpublished present a great deal of new data and address a range of theoretical issues from a variety of perspectives
