

3.12 How do worker bees communicate the information to the other worker bees of the hive when they spot any source of food?

Answer: Communication by honey bees: The forager after searching out the source of nectar informs the workers in the beehive about the source of nectar. The language for this communication is a dance by the foragers. There are two types of bee dance indicating location and direction of the source and following that the worker bees can move for collecting nectar.

The round dance is performed in small circles, whereas the waggle dance is performed in the form of figure 8 with wagging of the abdomen. If the food source is very close to the hive i.e., less than 50 m metres, round dance is performed by the forager. If the food source is over 150 metres the forager shows waggle dance.

3.13. What do you mean by natural selection?

Answer: Natural selection:

- Natural selection claims that nature chooses animals that can survive and reproduce in changing environments, while those that cannot are wiped out.
- The genes that ensure the survival of an organism are handed down across generations.
- These characteristics become increasingly useful to the animals through time, and they grow more numerous in a population.
- Natural selection results in speciation, which is the process of generating new species.
- Thus, contributing to the evolutionary process.
