Context

This unit builds on the topic of sexual reproduction, covered in Units 6 and 7.

Syllabus ref	Learning objectives	Suggested teaching activities	Learning resources
8.1	8.1 Inheritance Define inheritance as the transmission of genetic information from generation to generation	Students to come up with a possible definition of inheritance.	Overview – Genes and inheritance: www.abp-schools.org.uk/page/modules/genome/index.cfm
8.1.1	8.2 Chromosomes - Define the terms: - chromosome as a thread of DNA made up of a string of genes - gene as a length of DNA that is the unit of heredity and codes for a specific protein A gene may be copied and passed on to the next generation: - allele as any of two or more alternative forms of a gene - haploid nucleus as a nucleus containing a single set of	Students should know that a chromosome is a length of DNA, and that each chromosome carries a large number of genes. They may be interested to discuss the human genome project, which has mapped all the genes on the human chromosomes. Students may be familiar with the terms haploid and diploid when considering the processes involved in sexual reproduction. A haploid cell is one with a single set of chromosomes (for example a gamete) while a diploid cell has two complete sets. Meiosis produces haploid cells from a diploid cell. It is important to use the terms 'gene' and 'allele' correctly right from the start.
