### **Acceleration of Biomedical Image Processing with Dataflow on FPGAs**

Frederik Gröll, Udo Kebschull, 2016-06-30 Short compute times are crucial for timely diagnostics in biomedical applications but lead to a high demand in computing for new and improved imaging techniques In this book reconfigurable computing with FPGAs is discussed as an alternative to multi core processing and graphics card accelerators Instead of adjusting the application to the hardware FPGAs allow the hardware to also be adjusted to the problem Acceleration of Biomedical Image Processing with Dataflow on FPGAs covers the transformation of image processing algorithms towards a system of deep pipelines that can be executed with very high parallelism The transformation process is discussed from initial design decisions to working implementations Two example applications from stochastic localization microscopy and electron tomography illustrate the approach further Topics discussed in the book include Reconfigurable hardware Dataflow computing Image processing Application acceleration

### **Deblurring Images** Per Christian Hansen, James G. Nagy, Dianne P.

O'Leary, 2006-01-01 The book's focus on imaging problems is very unique among the competing books on inverse and ill posed problems It gives a nice introduction into the MATLAB world of images and deblurring problems Martin Hanke Professor Institut für Mathematik Johannes Gutenberg Universität When we use a camera we want the recorded image to be a faithful representation of the scene that we see but every image is more or less blurry In image deblurring the goal is to recover the original sharp image by using a mathematical model of the blurring process The key issue is that some information on the lost details is indeed present in the blurred image but this hidden information can be recovered only if we know the details of the blurring process Deblurring Images Matrices Spectra and Filtering describes the deblurring algorithms and techniques collectively known as spectral filtering methods in which the singular value decomposition or a similar decomposition with spectral properties is used to introduce the necessary regularization or filtering in the reconstructed image The concise MATLAB implementations described in the book provide a template of techniques that can be used to restore blurred images from many applications This book's treatment of image deblurring is unique in two ways it includes algorithmic and implementation details and by keeping the formulations in terms of matrices vectors and matrix computations it makes the material accessible to a wide range of readers Students and researchers in engineering will gain an understanding of the linear algebra behind filtering methods while readers in applied mathematics numerical analysis and computational science will be exposed to modern techniques to solve realistic large scale problems in image processing With a focus on practical and efficient algorithms Deblurring Images Matrices Spectra and Filtering includes many examples sample image data and MATLAB codes that allow readers to experiment with the algorithms It also incorporates introductory material such as how to manipulate images within the MATLAB environment making it a stand alone text Pointers to the literature are given for techniques not covered in the book Audience This book is intended for beginners in the field of image restoration and regularization Readers should be familiar with basic concepts of linear algebra and matrix computations

including the singular value decomposition and orthogonal transformations A background in signal processing and a familiarity with regularization methods or with ill posed problems are not needed For readers who already have this knowledge this book gives a new and practical perspective on the use of regularization methods to solve real problems

Preface How to Get the Software List of Symbols Chapter 1 The Image Deblurring Problem Chapter 2 Manipulating Images in MATLAB Chapter 3 The Blurring Function Chapter 4 Structured Matrix Computations Chapter 5 SVD and Spectral Analysis Chapter 6 Regularization by Spectral Filtering Chapter 7 Color Images Smoothing Norms and Other Topics Appendix MATLAB Functions Bibliography Index

The School Journal ,1903 *Image-Based Damage Assessment for Underwater Inspections* Michael O'Byrne,Bidisha Ghosh,Franck Schoefs,Vikram Pakrashi,2018-07-18 Inspection is crucial to the management of ageing infrastructure Visual information on structures is regularly collected but very little work exists on its organised and quantitative analysis even though image processing can significantly enhance these inspection processes and transfer real financial and safety benefits to the managers owners and users Additionally new opportunities exist in the fast evolving sectors of wind and wave energy to add value to image based inspection techniques This book is a first for structural engineers and inspectors who wish to harness the full potential of cameras as an inspection tool It is particularly directed to the inspection of offshore and marine structures and the application of image based methods in underwater inspections It outlines a set of best practice guidelines for obtaining imagery then the fundamentals of image processing are covered along with several image processing techniques which can be used to assess multiple damage forms crack detection corrosion detection and depth analysis of marine growth on offshore structures The book provides benchmark performance measures for these techniques under various visibility conditions using an image repository which will help inspectors to envisage the effectiveness of the techniques when applied MATLAB scripts and access to the underwater image repository are included so readers can run these techniques themselves Practising engineers and managers of infrastructure assets are guided in image processing based inspection Researchers can use this book as a primer and it also suits advanced graduate courses in infrastructure management or on applied image processing

**Digital Image Processing** Uvais Qidwai,C.H. Chen,2009-10-15 Avoiding heavy mathematics and lengthy programming details Digital Image Processing An Algorithmic Approach with MATLAB presents an easy methodology for learning the fundamentals of image processing The book applies the algorithms using MATLAB without bogging down students with syntactical and debugging issues One chapter can typically be completed per week with each chapter divided into three sections The first section presents theoretical topics in a very simple and basic style with generic language and mathematics The second section explains the theoretical concepts using flowcharts to streamline the concepts and to form a foundation for students to code in any programming language The final section supplies MATLAB codes for reproducing the figures presented in the chapter Programming based exercises at the end of each chapter facilitate the learning of underlying concepts through practice This textbook equips undergraduate

students in computer engineering and science with an essential understanding of digital image processing It will also help them comprehend more advanced topics and sophisticated mathematical material in later courses A color insert is included in the text while various instructor resources are available on the author s website **New York School Journal** ,1903
