

Our New Line . . .

designed with a totally new approach: the satisfaction of ears.

The variables in the design of a speaker system are so numerous, and their interrelations so complex, that often the end purpose of a speaker system is lost in the shuffle. But the design of the products shown here has been approached with a new vista: Find out what people (as opposed to test equipment) prefer in their listening tastes, then design speakers to deliver just that.

Most other companies spend a good part of their time and efforts learning to build speakers. We know how to build speakers—

we've been doing it for nearly 40 years. So what we have put our research emphasis on is psycho-acoustics—the study of how people perceive what they hear. We learned what people like to listen to, then, armed with our new-found knowledge, designed and built a series of speaker systems using reliable, well-established acoustic technology, then housed them in some of the most appealing natural wood veneer enclosures ever to grace a bookshelf.
