Development of Circadian Clock Functions, volume II Daisuke Ono, Takahiro J. Nakamura, Jeff Jones, Jihwan Myung, Rae Silver, 2024-07-31 The temporal order of physiological functions such as sleep wakefulness is regulated by the circadian clock. This intrinsic clock starts ticking in the embryo and matures during development with attenuation of the clock function in the elderly illustrated by attenuation of synchrony entrainment and outputs of cellular circadian rhythms in the SCN. This age related diminution can contribute to the emergence of diseases such as sleep disorders, infertility, diabetes, mental disorders etc. Over the course of our lives a variety of internal and external factors are under the influence of the circadian clock. This inherent developmental plasticity of the circadian system is critical for the establishment of normal bodily functions to adapt to the changing environment on earth. In mammals the central circadian clock is located in the suprachiasmatic nucleus (SCN) of the hypothalamus. Circadian rhythms in the SCN are observed during the embryonic period and input and output pathways from the SCN are formed after birth. During postnatal development functions of neurotransmitters in the SCN are changed which have an influence on special temporal patterns of circadian rhythms in the SCN and outputs signals to the outside of the SCN. During postnatal development properties of circadian rhythms in the SCN and its inputs and outputs can be modulated by environmental light conditions. Recent optical manipulation and imaging techniques have revealed that cell type specific functions for circadian rhythms. However it remains unclear which cell types or networks in the brain are modulated during postnatal development and how these cells regulate circadian rhythms depending on postnatal period.

Primary and Stem Cells Uma Lakshmipathy, Bhaskar Thyagarajan, 2011-10-31 This book describes basic cell engineering methods emphasizing stem cell applications and use of the genetically modified stem cells in cell therapy and drug discovery. Together the chapters introduce and offer insights on new techniques for engineering of stem cells and the delivery of transgenes into stem cells via various viral and non viral systems. The book offers a guide to the types of manipulations currently available to create genetically engineered stem cells that suit any investigator's purpose whether it's basic science investigation, creation of disease models and screens or cells for therapeutic applications.

Insights in Infectious Agents and Disease: 2022 Axel Cloeckaert, 2024-07-18 We are now entering the third decade of the 21st Century and especially in the last years the achievements made by scientists in the field of Microbiology have been exceptional leading to major advancements. Frontiers has organized a series of Research Topics to highlight the latest advancements in science in order to be at the forefront of science in different fields of research. This specific editorial initiative led by Dr Axel Cloeckaert is focused on new insights, novel developments, current challenges, latest discoveries, recent advances and future perspectives in the field. The Research Topic solicits brief forward looking contributions from the editorial board members that describe the state of the art, outlining recent developments and major achieved accomplishments, future challenges and how to address those challenges to move the field forward. ROS Regulation during Plant Abiotic Stress Responses Zhulong Chan, Chun-Peng Song, Woe Yeon Kim, Ken Yokawa, 2017-02-08 Plants are continuously exposed to a wide range of environmental conditions including cold drought salt heat which have major impact on plant growth and development To survive plants have evolved complex physiological and biochemical adaptations to cope with a variety of adverse environmental stresses Among them reactive oxygen species ROS are key regulators and play pivotal roles during plant stress responses which are thought to function as early signals during plant abiotic stress responses ROS were long regarded as unwanted and toxic by products of physiological metabolism However ROS are now recognized as central players in the complex signaling network of cells Therefore a fine tuning control between ROS production and scavenging pathways is essential to maintain non toxic levels in plants under stressful conditions through enzymatic and non enzymatic antioxidant defense systems We focus on the roles of ROS during plant abiotic stress responses in this Research Topic Plant responses to multiple abiotic stresses and effects of hormones and chemicals on plant stress responses have been carefully studied Although functions of several stress responsive genes have been characterized and possible interactions between hormones and ROS are discussed future researches are needed to functionally characterize ROS regulatory and signaling transduction pathways

Gene Transfer Theodore Friedmann, John J. Rossi, 2007 Understanding gene function and regulation requires rigorous testing in live cells and organisms Recent advances have provided a variety of new strategies for delivering DNA and RNA into cells and probing their expression as well as new clinical applications that rely upon the introduction of genetic material The vast number of available techniques for clinical and laboratory research often makes selecting the optimal method a difficult process Gene Transfer Delivery and Expression of DNA and RNA provides the first comprehensive guide to technical approaches for delivering nucleic acids into cells and organisms and of ensuring even manipulating appropriate expression The detailed step by step protocols cover a variety of methods both well established and newly evolving These include viral and nonviral methods of gene delivery transgenic approaches strategies for the regulation of transgene expression and modification of the host response The introductory matter to each chapter includes concise technical and theoretical discussions with considerations for selection of the appropriate system and strategies for delivery
