

Integrating the AIS into an **integrated bridge system (IBS)** will display the received AIS target information on a compatible ARPA or ECDIS giving the navigator the optimum use of the received navigational information. The target information is then displayed in a way that makes it easy for the navigator to see course, speed, rate and direction of turn of other approaching vessels.

If the ARPA or ECDIS equipment is approved for use together with the AIS transponder the VDU may not be required in the installation. However in many cases it will be necessary to install the VDU to meet the SOLAS requirements. In these installations the VDU will be used to load the transponder with own ship data and the ARPA or ECDIS equipment will be used to display the received target information.
