It covers many practical topics such as installation, maintenance, and potential issues, giving an overview of available techniques along with recommendations for application. In addition, it covers available flow sensors such as automation and control. The author brings his 35 years of experience in working in instrumentation and control within the industry to this title with a focus on fluid flow measurement, its importance in plant design, and the appropriate control of processes. The book provides a good balance between practical issues and theory and is fully supported with industry case studies and a high level of illustrations to assist learning. It is unique in its coverage of multiphase flow, solid flow, process connection to the plant, flow computation, and control. Readers will not only further understand design but they will also further comprehend integration tactics that can be applied to the plant through a step-by-step design process that goes from installation to operation. Provides specification sheets, engineering drawings, calibration procedures, and installation practices for each type of measurement. Presents the correct flow meter that is suitable for a particular application. Includes a selection table and step-by-step guide to help users make the best decision. Anderson, 2017-11-01 The perennially bestselling third edition of Norman A. Anderson's *Instrumentation for Process Measurement and Control* provides an outstanding and practical reference for both students and practitioners. It introduces the fields of process measurement and feedback control and bridges the gap between basic technology and more sophisticated systems. Keeping mathematics to a minimum, the material meets the needs of the instrumentation engineer or technician who must learn how equipment operates. It covers pneumatic and electronic control systems, actuators and valves, control loop adjustment, combination control systems, and process computers and simulation. *Guidance, Navigation, and Control for Spacecraft Rendezvous and Docking: Theory and Methods* Yongchun Xie, Changqing Chen, Tao Liu, Min Wang, 2021-02-16 This book focuses on the theory and design methods for guidance, navigation, and control (GNC) in the context of spacecraft rendezvous and docking (RVD). The position and attitude dynamics and kinematics equations for RVD are presented systematically in accordance with several different coordinate systems, including elliptical orbital frame, and recommendations are supplied on which of these equations to use in different phases of RVD. The book subsequently explains the basic principles and relative navigation algorithms of RVD sensors such as GNSS, radar, and camera-type RVD sensors. It also provides guidance algorithms and schemes for different phases of RVD, including the latest research advances in rapid RVD. In turn, the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for RVD. Emphasis is placed on the design method of active and

passive trajectory protection in different phases of RVD and on the safety design of the RVD mission as a whole For purposes of verification the Shenzhou spacecraft s in orbit flight mission is introduced as well All issues addressed are described and explained from basic principles to detailed engineering methods and examples providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for GNC system design in RVD
