their respective fields offer a perspective into this rapidly changing discipline of quantitative consumer research. The book focuses on new techniques as well as adaptations of traditional approaches and addresses ethics that relate to contemporary research approaches. The text is appropriate for use with university students at all academic levels. Each chapter provides both a theoretical grounding in its topic area and offers applied examples of the use of the approach in consumer settings. Exercises are provided at the end of each chapter to test student learning. Topics covered are quantitative research techniques, measurement theory and psychological scaling, mapping sentences for planning and managing research using qualitative research to elucidate quantitative research findings, big data and its visualization, extracting insights from online data, modeling the consumer, social media and digital market analysis, connectionist modeling of consumer choice, market sensing and marketing research, preparing data for analysis and ethics. The book may be used on its own as a textbook and may also be used as a supplementary text in quantitative research courses.

Complexity in Entrepreneurship, Innovation and Technology Research
 Elisabeth S.C. Berger, Andreas Kuckertz, 2016-02-25 This volume discusses the challenge of dealing with complexity in entrepreneurship, innovation and technology research. Businesses as well as entire economies are increasingly being confronted by widespread complex systems. Fields such as entrepreneurship and innovation cannot ignore this reality, especially with their inherent links to diverse research fields and interdisciplinary methods. However, most methods that allow more detailed analyses of complex problems are either neglected in mainstream research or are at best still emerging. Against this backdrop, this book provides a forum for the discussion of emergent and neglected methods in the context of complexity in entrepreneurship, innovation and technology research and also acts as an inspiration for academics across related disciplines to engage more in complexity research.

Applied Bayesian Statistics Scott M. Lynch, 2022-10-31 Bayesian statistical analyses have become increasingly common over the last two decades The rapid increase in computing power that facilitated their implementation coincided with major changes in the research interests of and data availability for social scientists Specifically the last two decades have seen an increase in the availability of panel data sets other hierarchically structured data sets including spatially organized data along with interests in life course processes and the influence of context on individual behavior and outcomes The Bayesian approach to statistics is well suited for these types of data and research questions Applied Bayesian Statistics is an introduction to these methods that is geared toward social scientists Author Scott M Lynch makes the material accessible by emphasizing application more than theory explaining the math in a step by step fashion and demonstrating the Bayesian approach in analyses of U S political trends drawing on data from the General Social Survey *Insights in Sustainable Consumption: 2022* Sylvia Lorek, Henrike Rau, 2023-10-18 We are now entering the third decade of the 21st Century and especially in the last years the achievements made by scientists have been exceptional leading to major advancements in the fast growing field of sustainability research Frontiers has organized a series of Research Topics to highlight the latest advancements in research across the field of sustainability with articles from the Associate Members of our accomplished Editorial Boards This editorial initiative of particular relevance led by Prof Sylvia Lorek Specialty Chief Editor of the Sustainable Consumption section together with Dr Henrike Rau is focused on new insights novel developments current challenges latest discoveries recent advances and future perspectives in the field of sustainable consumption Gendering Post-Soviet Space Tatiana Karabchuk, Kazuhiro Kumo, Kseniia Gatskova, Ekaterina Skoglund, 2021-02-01 This volume combines approaches from three disciplines economics sociology and demography and empirically analyzes the key aspects of the labor market and social demography processes in post Soviet transitional societies while focusing on the gender perspective Here readers will find empirical studies on such countries as Armenia Azerbaijan Belarus Estonia Georgia Kazakhstan Kyrgyzstan Russia Tajikistan Ukraine and Uzbekistan The volume contributes to the literature by addressing the lack of academic empirical research on gender difference issues in the labor markets of post Soviet countries as well as gender inequalities in fertility preferences gender disparities among the youth and elderly the gender pay gap gender differences in employment and female voices The book brings together researchers of different disciplines from a variety of countries distinguishing this project as international and interdisciplinary The authors use the quantitative survey micro data approach as well as the qualitative methods of interview data analysis to provide a comprehensive and detailed overview of

the economic and social developments in the region regarding gender differences The volume consists of three parts tackling the following topics 1 gender differences and demography family formation and fertility youth and elderly employment 2 gender differences and labor market gender wage gap motherhood wage penalty gender differences among freelancers and women in STEM science and 3 gender differences well being and gender equality attitudes women s voices women s collective actions gender equality attitudes and spending patterns of housewives *How Politicians Polarize* Mia Costa, 2025-03-26 A fresh examination of political representation in an era of negative partisanship What does representation look like when politicians focus on othering the opposing party rather than the policy interests of their constituents How do voters react to negative partisan rhetoric And is policy responsiveness still the cornerstone of American representative democracy In *How Politicians Polarize* Mia Costa draws on survey experiments analysis of congressional newsletters and tweets and data on fundraising and media coverage to examine how and why politicians rely so often on negative partisan attacks Costa shows that most Americans do not like negative rhetoric and politicians know this Nonetheless these kinds of attacks can reap powerful rewards from national media donors and party elites Costa s findings challenge the popular notion that Americans are motivated more by their partisan identities than by policy representation Her research illuminates how the political ecosystem rewards negative representation and how this affects the quality of American democracy

introduces researchers and students to the concepts and generalized linear models for analyzing quantitative random variables that have one or more bounds Examples of bounded variables include the percentage of a population eligible to vote bounded from 0 to 100 or reaction time in milliseconds bounded below by 0 The human sciences deal in many variables that are bounded Ignoring bounds can result in misestimation and improper statistical inference Michael Smithson and Yiyun Shou's book brings together material on the analysis of limited and bounded variables that is scattered across the literature in several disciplines and presents it in a style that is both more accessible and up to date The authors provide worked examples in each chapter using real datasets from a variety of disciplines The software used for the examples include R SAS and Stata The data software code and detailed explanations of the example models are available on an accompanying website

A Mathematical Primer for Social Statistics John Fox, 2021-01-11 A Mathematical Primer for Social Statistics Second Edition presents mathematics central to learning and understanding statistical methods beyond the introductory level the basic language of matrices and linear algebra and its visual representation vector geometry differential and integral calculus probability theory common probability distributions statistical estimation and inference including likelihood based and Bayesian methods The volume concludes by applying mathematical concepts and operations to a familiar case linear least squares regression The Second Edition pays more attention to visualization including the elliptical geometry of quadratic forms and its application to statistics It also covers some new topics such as an introduction to Markov Chain Monte Carlo methods which are important in modern Bayesian statistics A companion website includes materials that enable readers to use the R statistical computing environment to reproduce and explore computations and visualizations presented in the text The book is an excellent companion to a math camp or a course designed to provide foundational mathematics needed to understand relatively advanced statistical methods
